The Macintosh Product Guide 1990-91

*Hardware
Software
Peripherals
Custom Applications*

The most comprehensive listing of Macintosh products available in Australia and New Zealand

**“Truly usable
accounting
software,
and it works
superbly.”**

- MARSHALL AHERN SYDNEY, OCTOBER 1990

Speedworks

Fast and so easy. A simple debtors package that becomes a complete accounting program when you link it with Microsoft Works. Does invoices too. \$595

Accounting Manager

Made for your industry. Fast, simple accounts to tell you everything you need to know. Meets ASA requirements. \$3,995

Professional Manager

By consultation.

Invoice Manager

Custom made for you. Fast service industry invoices and cash allocation. Minimises your typing. \$1,995

Membership Manager

Now you can afford a comprehensive membership and mailing system. Gives you quick publication sales and accounting. Multiuser with central treasury. Fast cash receipts. Custom made from \$9,000.

Payroll Manager

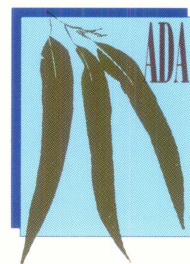

An Australian package that gives you usable flexibility. Quickly parameter driven for changes to the law. \$995

Warehouse Manager

Custom made for your product sales. Likely to be the fastest multi-user multi-store program available on the Mac. Replaces old Mini computers with Apple's new high speed Appleshare. You get truly usable management information. Ten module system from \$9,000 to \$25,000 (40% cheaper than the competition).

177 WALKER STREET, NORTH SYDNEY 2060

Welcome once more to our annual Macintosh Product Guide for 1990-91.

Although we do not publish a separate January issue, the Guide has in effect become our 12th issue in the year, published under a separate cover as a bonus to our subscribers. It is our way of saying "Thank you" for your continued support.

The Product Guide remains the most comprehensive listing of hardware, software and other Macintosh-related products available in Australia and New Zealand. It is not, however, a total listing of products, for this year we have asked product vendors to contribute toward the cost of producing this special publication. Some decided not to participate in these listings, or got this year's material to us too late to meet our deadlines, and this explains the absence of some products.

Categories used in the Products Guide are classed by application rather than strictly by product type. Products are listed alphabetically within each application's category. A few fields encompass both hardware and software (for example, many networking products), when their functions overlap. In general, the codes 1000-1999 encompass hardware products, moving into the 2000-2999 range for software, and 3000+ for vertical market, highly specialised applications.

Each product is listed in the following order:

Name	Version No
Description	
Requirements or minimum Mac configuration	Price (listed as tax inclusive, unless otherwise specified)
Manufacturer	
Australian distributor	

Disclaimer, Pt. I: The product descriptions are based on material supplied by the manufacturers or distributors in most instances. Australian Macworld has not tested each claim. You are urged to make your own critical investigation.

Disclaimer, Pt. II: In a market as mercurial as high tech, prices and even vendors can change rapidly. As we went to press, last minute price amendments were received which may not have made it into print; and some products may have changed distributor by the time you read this. It is a guide, not Holy Writ, and we apologise if some of the information contained in it is somewhat less than current by the time you read it.

We would again like to take this opportunity to acknowledge a very special thanks Ms. Deborah Erlich, for her valuable assistance in compiling this year's Product Guide.

1000 Hardware Guide

1010 accessories

Covers a miscellaneous range of goods for use with the Macintosh, such as keyboards, security systems, covers and carry cases, mouse mats, joy sticks, "computer furniture", and devices to ergonomically enhance your Mac. Accessories also include such cables as AppleTalk connectors, printer cables, and monitor cables.

1010 accessories

3.5in Disk-Rainbow Colours

LaserWriter labels, removable (\$140) or "high gloss" permanent (\$165). They also come in white (\$110). Pin-fed labels are also available for impact printers (\$105).

Australian Macworld is published by
IDG Communications Pty Ltd.

The Macintosh Product Guide 1990-91 is an annual publication of *Australian Macworld*. It is intended as a reference guide to hardware, software and peripheral products distributed in Australia and New Zealand. It does contain some products which we anticipate will be distributed locally during the lifetime of the book, even though only the manufacturer's name was known to us at the time of compiling this listing.

If a product is of interest, we recommend that you ask your favourite reseller, Macintosh retail outlet or mail order firm to order it for you; and we would issue the usual caveats about trying products before you buy, in that the listings are based on manufacturers' descriptions and not on independent reviews.

It is the business of retailers to know which distributor supplies which products in Australia. But for your convenience, we have listed phone numbers of the distributors and manufacturers' representatives. These wholesalers should be able to point you to a reseller in your area.

JAM Productivity Enhancers for All Mac users:

Smart Alarms™ 3.0 & Appointment Diaries

The most widely used reminder & calendar system
is now *even easier*.

- ☐ Two month calendar display with extensive daily note taking ability.
- ☐ Reminders that display your own message while in any application.
- ☐ Format your diary page with individualised day or auto-layouts.
- ☐ Set advance warnings and recurring reminders with easy re-scheduling.
- ☐ Have reminders play different sounds and launch macros.
- ☐ Set multiple reminders and times from your Diary.
- ☐ Import, export and "Smart-merge" reminders.
- ☐ Diary Migration imports and exports to Z88, and to text.
- ☐ **Multi-User Appointment Diaries** are fully compatible with TOPS™, AppleShare™, AllShare™ & PSN™.
- ☐ **Corporate & Institution Site Licenses** for over 50 Macintoshes.
- ☐ Now integrated with **MacList™** our handy DA List Manager: Supports multiple fonts and styles, searches, sorts, imports and exports, calculates, converts and transfers data, and dials modems.

JAM Productivity Enhancers for Small Businesses:

Smart Biz™

- ☐ An integrated, electronic, customer, sales marketing & debtors system.
- ☐ All you need to run the sales side of a business.
- ☐ Call tracking and prospecting, quotes, invoices, receipts and banking.
- ☐ Purchasing, inventory and customer product registration, & much more.

JAM Productivity Enhancers for Health Professionals:

Medical Electronic Desktop™

(formerly known as MacMED™)

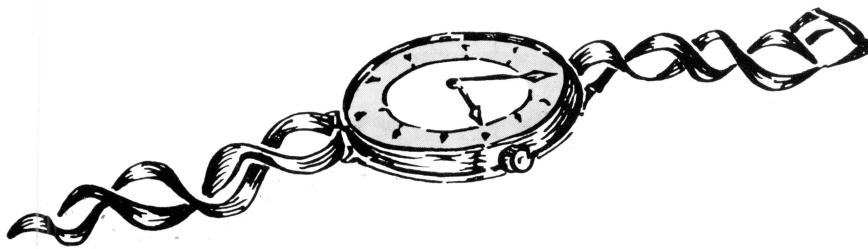

- ☐ Powerful. Simple to use.
- ☐ Organizes all aspects of running your practice.
- ☐ Billing, Patient Records, Scheduling, Word Processing, Research.
- ☐ Many add-ons, like Aries MEDLINE® Knowledge Finder™.
- ☐ Installation, training and on-going support.
- ☐ Our medical division offers a level of medical and technical expertise equalled nowhere in the industry.
- ☐ We have representatives in most states.
- ☐ Development and ownership is wholly Australian.
- ☐ JAM Software is an Apple Authorised Reseller & international multiple award-winning Macintosh Software developer & publisher.

JAM Software Pty. Limited.

Sales & Service: 513 Liverpool Rd., Sth Strathfield 2136.

WHY WAIT?

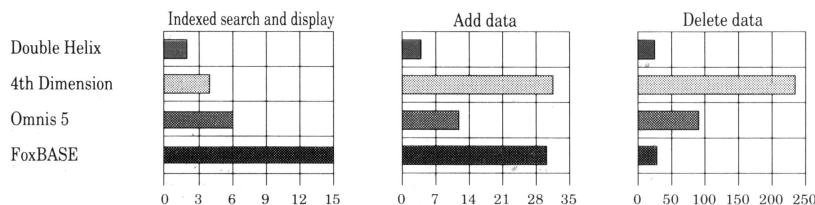

Speed is the issue when comparing multi-user databases.

In a multi-user database the pain of waiting is multiplied by every user who logs on. If your database also depends upon fileserver software then you can be waiting a lot longer than necessary, because file servers have more to do than serve databases. Word processors working on a document, artists downloading graphics and spreadsheet analysts crunching numbers clog up the fileserver—and you're in the queue too.

What you need is a server dedicated to your database.

MultiUser Helix

Multi-User Helix is the only Macintosh database that uses client/server technology to give you true service.

- **FAST:** MacUser June 1990 tested the major multi-user databases and found that MultiUser Helix outperformed Omnis, 4D and FoxBASE+Mac in virtually every test. MultiUser Helix uses client/server technology and a multi-threaded searching algorithm to reduce user wait states and increase performance.
- **SECURE:** For data integrity, automatic external logging of transactions reduces the exposure of your database to corruption. User security features include individual passwords and form permissions.
- **EFFICIENT:** Dynamic record locking minimizes disruption to other users while ensuring the integrity of the database when changes are made. Visual integrity means all users see and use current data.
- **VALUE:** Because you don't need file server software, MultiUser Helix costs less to install and offers performance advantages that represent real savings.
- MultiUser Helix 3.0: \$800 RRP for 4 users. Additional users (in packs of 4): \$800 RRP.
- Double Helix 3.0 required for application development: \$850 RRP.
- Helix VMX allows you to exploit the power of the Digital Equipment Corporation's VAX machines while using Macintosh or VT Terminals.

1020 Macintosh

Cambridge Z88 Laptop Computer

A Mac-companion laptop computer, weighing less than 1kg. Fits into a briefcase and runs a streamlined, menu-driven operating system geared toward simple text processing and spreadsheet/database. It has a full QWERTY keyboard (virtually silent), and a 64 x 640 pixel supertwist 1in x 10in LCD display which is legible under most lighting conditions. There is no disk drive. Applications are stored on 128K ROM, and data is stored in removable 32K, 128K or 512K memory cards, which retains information as long as the batteries are functional. EPROMs in 32K or 128K sizes are available which require no battery backup and enable data to be stored outside the machine and transferred between Z88s. It warns if batteries are low and retains power while they are replaced. It turns itself off after a few minutes of inactivity. Additional applications are available on ROM cards. It can be combined with the Diconix 150+ printer and Xiocon modem for the basis of a very portable office. The price is for the basic machine, with other RAM and EPROM cards, mains power supply, etc, being extra.

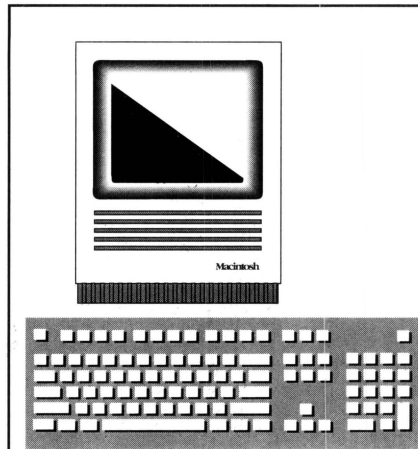

\$995

Cambridge Computers
ZComp Computers

1020 Macintosh

Macintosh Classic

Features the familiar compact footprint and integrated 9in black-and-white monitor of the Plus and SE. Light enough to carry from place to place, it uses an 8-MHz Motorola 68000 CPU. Offers a single 1.4Mb internal floppy drive (the SuperDrive), space for an internal hard disk drive, plus an Apple Desktop Bus (ADB) connector for the included keyboard and mouse. There is no expansion slot. Circuitry includes all the standard features that Mac owners take for granted – a graphical user interface in ROM, a SCSI port, a serial port designated for modem use, a serial port for a printer or an AppleTalk network; and an audio output jack. Unlike all other Macs, the Classic's power supply works only with the voltage of the country in which it was designed to be sold. The new logic board has 1Mb of RAM soldered onto it with another 1Mb soldered onto a RAM expansion board.

This expansion board also has two standard SIMM sockets permitting 2Mb, 2.5Mb and 4Mb configurations. A Mac Classic can't use 4Mb SIMMs. The floppy drive stores 1.4Mb on high density disks, 800K on standard density double-sided disks, or 400K on single-sided disks. It also reads, writes, and formats MS-DOS and OS/2 disks from PC compatibles, and ProDos disks from Apple IIs. A second floppy drive cannot be installed. The third-height, 3.5in internal hard drive mounts above the floppy drive. Screen brightness is controlled via Control Panel, and the audio jack outputs two-channel monaural sound at levels compatible with most headphones. A fairly quiet, constant-speed fan sucks air through a vent in the bottom of the Classic. Performance is the Classic's weakest characteristic. However it's enough for word processing, spreadsheets, flat-file databases, black-and-white graphics. Priced competitively with PC compatibles of similar capabilities, it is good value for people with basic needs and a tight budget.

\$2,000-3,000

Apple Computer Inc
Apple Computer Australia Pty Ltd

1020 Macintosh

Macintosh IIci

Improving on the IIcx line, it offers the 25-MHz 68030 processor together with 80 ns DRAM, implements the burst mode of the 68030 CPU; provides a cache connector ready for either Apple-labelled or third-party hardware RAM cache cards of 32K or 64K; incorporates a video card on a VLSI chip which supports either 640 x 480 pixel displays in up to 256 colours/grey levels, or the larger 640 x 870 displays in up to 16 grey levels; 32-bit QuickDraw is incorporated in the 512K ROMs; provides an optional parity support kit supported in the system software; and is 32-bit "clean" that is ready for a 32-bit operating system and thus Unix-compatible. Approx 20% faster than the Mac IIcx or SE/30, a visible difference for graphics and calculation-intensive tasks. Base version with SuperDrive and 1 Mb RAM sells for \$9650; 4Mb and 80Mb HD \$12,750.

\$9,650 - 12,750

Apple Computer Inc
Apple Computer Australia Pty Ltd

1020 Macintosh

The current list of Macintosh models available for sale in Australia. We also list third-party products that run on a Macintosh interface and support available software, Macintosh "conversions" (such as Outbound), and CPUs which have a commonality with the Mac (for example, the Cambridge Z88 portable).

1020 Macintosh

Macintosh IIcx

A 32-bit Macintosh with 16-MHz 68030 CPU and an 80-bit 68882 co-processor, a 1.4Mb internal SuperDrive. Features: support for colour QuickDraw; separate 256-byte caches for data and instructions; and a PMMU (Page Memory Management Unit) that supports multitasking operating systems such as A/UX. Provides three NuBus slots compatible with 32-bit expansion cards, two RS232 ports, two ADB ports, a SCSI port, an external floppy drive port and a stereo audio port. Available with 1Mb-8Mb RAM and 40- or 80Mb internal hard drives. Includes mouse, system software, HyperCard and documentation.

\$7,395 - 10,4995

Apple Computer Inc
Apple Computer Australia Pty Ltd

1020 Macintosh

Macintosh IIIfx

The fastest Mac yet developed, it runs a 40-MHz 68030 CPU/68882 co-processor combination, a built-in 32K Static RAM Cache. It uses dedicated I/O processors, SCSI/DMA controller; and includes an expansion slot tied directly to the processor plus six NuBus slots. Improvements on the Mac II include quieter, variable speed fan, and fully adjustable ergonomically designed extended keyboard. Other features include: 512K ROM containing 32-bit QuickDraw, a different type of RAM to other Macs, SuperDrive, 4Mb RAM expandable (with 16Mbit chips) to 128Mb, and 80Mb or 160Mb internal hard drive.

\$13,995-16,995

Apple Computer Inc
Apple Computer Australia Pty Ltd

1020 Macintosh

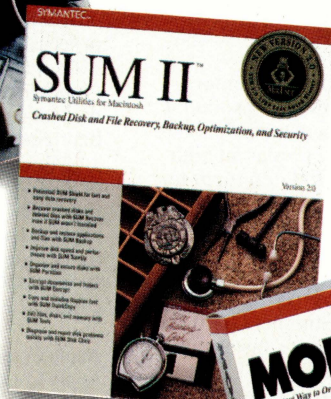

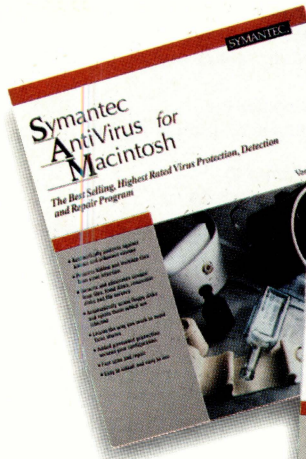

Macintosh IIsi

A reduced-height IIcx replacement which retains its best features for a mid-range price. Offers a 20-MHz Motorola 68030 CPU, built-in colour video support and stereo sound output, but only one expansion slot. You'll have to use the one slot for a video card if you need 24-bit colour or a two-page monitor. Its basic

Symantec Makes Leaders.

NEW RELEASE!

SAM Version 2.0: Protects against both known and unknown viruses and clones, repairs virus-infected files, and offers a 24-Hour Virus Newsline* for instant updates. Awards: Five Mice rating and a 1989 Eddy Award from MacUser as "The Best Anti-Viral Program" you can buy.

SUM II: A comprehensive set of Macintosh utilities for automatic hard disk data protection, including fast data recovery, and improved hard disk performance. Awards: Five Mice rating from MacUser, MacUser Eddy Award, Macworld Readers' World Class Award and Publish! magazine Reader's Choice Award, 1989.

THINK C Version 4.0: Ultra-fast, C language programming environment. Chosen to develop Aldus Pagemaker 2.0, Quark Express 2.0, and MacWrite II, THINK C earns its title "The Professional's Choice." Awards: MacUser's Editor's Choice Award in 1988, The Software Publisher Association's Best Programming Language Award, MacUser Eddy Award, and BYTE's Award of Distinction in 1989 and 1990.

NEW RELEASE!

MORE Version 3.0: Combines the best of outlining, word processing and presentation software. Includes over 100 new templates not available in MORE II, which earned a Five Mice rating from MacUser, 1989; and InfoWorld's "Best In Its Class" Award, 1988.

NEW RELEASE!

THINK Pascal Version 3.0: The most comprehensive object oriented Pascal support, for both learning and professional programmers. Awards: MacUser's Five Mice rating in 1988, Macworld's World Class Award (Australia), and MacGuide's Golden Gavel Award in 1989.

For Symantec, leadership stems from a passion for uncompromising quality and a simple formula. We ask our customers what they need today, add power for the future, and craft it all together into software that business people can easily use. That's why Symantec's Macintosh products are so highly acclaimed. By both critics, and customers. We make software for leaders in business, who in turn, make our products leaders in software.

configuration includes 2Mb RAM; will support virtual memory in System 7.0; an internal third-height 40Mb hard disk drive; a 1.4Mb SuperDrive for floppy disks; and a microphone with built-in sound recording circuitry. Users may choose between monochrome and colour monitors, and keyboard style. The IIsi can run Apple's A/UX version of the Unix operating system. The IIsi is housed in a smaller box than the other Mac IIs, measuring 10cm high, 32cm wide, and 38cm deep, and weighs just 9.5 kilos. The case can support up to a 19in monitor such as Apple's Two-Page Monochrome Monitor. It offers just one ADB connector instead of the previously standard two, which means you can add just one additional input device beyond the keyboard and mouse. The IIsi is cooled by a small, single-speed fan, switches itself and a monitor on with the power-on key, and can turn itself back on after a power failure. The speaker faces the bottom of the case, which doesn't help the sound quality, but it is adequate for voice. When you start up the IIsi, its video circuitry senses and adapts itself to the monitor you've attached. It supports up to 256 colours and 16 shades of grey. A separate NuBus display adapter is required to support Apple's 2-Page Monochrome Monitor. In its 16- and 256-colour modes, the IIsi's on-board video runs slower than does a NuBus video board; and up to 320K less memory in the 256-colour mode is available to run programs, so that colour users may want to consider upgrading to 5Mb RAM. The IIsi uses standard SIMMs, with 1Mb soldered to Bank A, and four SIMM slots in Bank B. With 4Mb SIMMs, the logic board can thus hold up to 17Mb. The 32-bit clean 512K ROM contains 32-bit QuickDraw, plus a SIMM slot designed to hold any future ROM upgrades. The IIsi does not contain a 68882 numeric coprocessor. However the single expansion slot which accepts either a NuBus card or an 030 Direct Slot card requires an adaptor card, which also contains the 68882 maths chip, to be fitted first. Users who want colour, swift performance, and all the other trappings of the Mac II family, and may want to upgrade to 24-bit colour someday can be accommodated with a IIsi. But for anyone who wants to combine, say, 24-bit colour with other processing cards, the IIsi is the wrong machine.

\$7,000-9,000

Apple Computer Inc
Apple Computer Australia Pty Ltd

1020 Macintosh Macintosh LC

A half-height "Mac II" with built-in colour video for half the money. A 12in colour monitor sits on top of the chassis, causing the whole bundle to form a smooth cube. Offers 16-bit data path, 8-bit colour built in, a 68020 CPU running at 16-MHz, 512K ROM chips with 32-bit QuickDraw built in, 2Mb RAM, a 40Mb internal hard disk, and a 1.4Mb floppy drive. However, it lacks the PMMU chip for the virtual memory feature of System 7.0. Also includes SCSI port, built-in

video output, microphone and a stereo jack for MacRecorder-quality sound input, a new ADB keyboard and mouse. Its single expansion slot is not compatible with any currently shipping add-in cards. It does not have a 68881 or 68882 maths co-processor. The internal 3.5in, third-height (1in) drive hard drive is currently limited to 45Mb capacity. However, it supports external hard drives. Ships with 2Mb of 80-nanosecond RAM soldered onto the main logic board plus two additional slots for up to 4Mb RAM each. Both slots must be filled for the Macintosh LC to recognize the memory. Although it uses only 8-bit mono sound it is satisfactory for voice, and a headphones jack allows a mono signal to play in both ears and an adapter allows stereo input to be heard as mono, while still allowing the Mac's various beeps to be heard. A key feature is its ability to emulate an Apple IIe by using a special \$400 Apple IIe option card that plugs into the direct slot. Also to be offered is an Ethernet board for connection to a network that's faster than AppleTalk. List price of a colour LC system with 2Mb of RAM, a 40Mb hard drive, and Apple's new 12in colour monitor is under \$4,000. A monochrome system lists for \$3,000.

\$3,000-4,000

Apple Computer Inc
Apple Computer Australia Pty Ltd

1020 Macintosh Macintosh Portable

Not a laptop (38 x 38cm, 10cm high in the back, weighing 6.9kg) in a "bullet proof" polycarbonate shell. Performance is roughly halfway between a Mac SE and a Mac II: 16-MHz MC68000 CPU, 1Mb of high-speed static RAM (using 256K chips), 256K ROM, a stereo sound port. Provides a half-height SuperDrive floppy, 40Mb 3.5in hard drive; optional second (smaller) internal drive, and port for another external SuperDrive. Available without a hard disk, with the option of external hard disks from the SCSI port. The screen is a sharp 640 x 400 pixel (77 dpi) monochrome active matrix LCD display with a wide viewing angle, reflective instead of back-lit. Video port accommodates external video (its adapter runs standard Mac monitors, NTSC and SECAM output, and PAL standard, including colour). The 63-key, built-in regular Apple keyboard, trackball and an ADB port. Limited bus expansion capabilities, with Processor Direct Slot (PDS) a 120-pin socket for networking; a ROM slot for a third-party or user-designed board containing 512K up to 3Mb of ROM; and an 18-pin modem slot, designed for an internal 2400-baud modem. There's no on/off switch. Power is conserved by auto which monitoring use a rest mode (shutting off the display and the hard disk), and a sleep mode (turns off the CPU completely). Press any key and all applications are as you left them. It uses a lead-acid battery which can be recharged at any time without the NiCad "memory" effect. Offers the Battery DA and warning software, and auto-shutdown with four days to recharge the battery before the memory loses its

contents. A built-in transformer automatically adapts from 70 to 270 volts; and sports the "traveller"-type exchangeable power points.

\$9,450+

Apple Computer Inc
Apple Computer Australia Pty Ltd

1020 Macintosh Macintosh SE/30

A 32-bit, faster version of the SE with a 16-MHz 68030 processor, 68882 math co-processor and 1Mb RAM expandable to 8Mb. Features include built-in monochrome display, the Apple FDHD high-density (1.4 Mb) internal disk drive that reads and writes 400K, 800K and 1.4Mb disks and MS-DOS, OS/2 (720K or 1.44Mb) and 800K ProDos disks. Equipped with an 030 Direct Slot expansion interface compatible with third-party video, memory and communications products. Capable of 32-bit colour with card and external monitor.

\$7,950 - 9,950

Apple Computer Inc
Apple Computer Australia Pty Ltd

1020 Macintosh Outbound

A 4kg Mac-compatible portable which includes a back-lit, double super-twist screen, 1Mb of RAM and a floppy disk drive that reads Macintosh and MS-DOS disks. Other features: an infrared keyboard and a fast silicon disk or RAM drive expandable to 16Mb. The silicon disk retains data for up to a month without AC power. Requires transfer of Mac Plus or SE ROM chips to the portable. Can be operated as a battery-powered laptop using standard lead-acid batteries, or plugged into a Mac Plus or SE. When connected to the original Mac, the two systems use the laptop's MC68000 CPU, running at 15-MHz (twice the speed of the SE). The setup can make use of disk drives, screens and memory in both machines. An external LCD port allows the system to drive LCD overhead projectors. In place of a mouse, which is optional, the Outbound uses a pencil-shaped pointing device built into the keyboard. The tiny floppy drive reads all Macintosh formats up to 1.4Mb and two IBM formats. A set of ROM chips are installed into the Mac host and provide it with AppleTalk Filing Protocol services, thereby transforming the Mac into an AppleShare-compatible file server. Users can access the office Mac remotely via a modem, as if you were connected on an in-house network to print to the office printer, share files, and so on. The cost of this option is less than \$US250. Also added is a SCSI adapter and Emulator for \$US149.

\$US2,995

Wallaby Systems
none/TBA

1021 co-processors

A range of CPU enhancement products, such as the Motorola 68882 maths co-processor. These can be used to upgrade Macintoshes, for example the Mac II up to the performance levels of the IIsi or IIfx. Firmware is included which helps developers with software design. More sophisticated products also add transputers and RISC processing, to go well beyond the performance of any off-the-shelf Macintosh.

1021 co-processors

Apple IIe Emulation Card

Contains a 65C02 processor that runs Apple IIe programs. Half of the memory is used as standard Apple IIe memory. (Upping an Apple IIe program's allotted memory in the Mac's Get Info box allows the application to use the Macintosh LC's.)

Macintosh LC \$400 est

Apple Computer Australia Pty Ltd

1021 co-processors

ExpanSE Home BaSE

The Macintosh Portable can be converted to a better-than-standard Mac SE using this expansion chassis, which adds two standard Macintosh SE slots for video cards, communications cards and so on. It plugs in via a cable and interface card, and comes complete on a chassis with a 25-watt power supply and a cooling fan. The expansion chassis solutions from Second Wave may have been receiving less attention than they deserve, given that they often offer better and cost-competitive solutions for bridging and expanding Mac models. Others offered extend from the Mac Plus to the Mac IIfx.

Siclone Mac II Accelerators

Mac IIfx version of Siclone Si3033 accelerator, which doubles system speed. All Si3033 models now equipped with an optional 33.3-MHz 68882 math coprocessor. The Si3033cx accelerator adds a 33.3-MHz 68030/68882 with 64K of cache memory, providing an interface for Mac users who don't need six slots. The single-board Si3033cx plugs into the 68030 socket, leaving the three NuBus cards open. It uses the 64K burst mode of the 68030 compatible with 32-bit QuickDraw and A/UX and DMA NuBus

cards. A Cache Control cdev is supplied, which lets users disable the instruction and data caches of the 68030 and the burst mode for either cache. It also prompts the users whether the accelerator is on or off, and if the optional 33.3-MHz 68882 is installed. Prices for the Mac II, IIfx, and IIfx are \$US4,995 with the coprocessor and \$US3,995 without the coprocessor. The Si3050, a 50-MHz CPU version of the accelerator board for the Mac II and IIfx, is also available. Offers 40% speed improvements over the 33-MHz accelerator.

ExpanSE Expansion

External hardware chassis expanding the Mac's ability to accept extra cards, from the Plus to the IIfx. ExpanSE Plus allows the Plus to accept up to four SE option cards; ExpanSE expands the capability of the SE to four SE option cards; Expanse II adds eight option card slots to the Mac II, with the option of up to three half-height SCSI drives. The Mac SE/30 lets you attach NuBus cards instead of an 030 Direct Slot card. It provides eight NuBus slots and includes a 130-watt power

1022 upgrades

Usually taken to mean RAM expansions for the Macintosh, which allow you to run larger applications at higher speeds; but enhancement boards such as additional NuBus slots are also listed. Remember that memory, say 4Mb, can be made up of 4Mb low profile modules, or 4Mb can come in slugs of 1Mb modules, high or low profile. Price is usually dependent on combinations of these factors. The speed of memory has recently become important. For the Mac II it must be 100 nanosecond DRAM or faster and for the Mac IIci it must be 80ns or faster.

supply for three SCSI devices. Expanse II/SA is the standalone version of Expanse II. When equipped with a master NuBus processor board, Expanse II/SA becomes a low-cost platform for an alternative computer system, capable of functioning under a variety of operating systems.

Now you can have it all.

Data protection on your Macintosh has never been easier or more convenient. Recovery from disasters has never been more powerful. But that's just the beginning.

With MacTools® Deluxe, you'll take less time to do more, with tools that improve system performance and help you manage your files more efficiently. You can:

- ☒ Recover from hard disk crashes
- ☒ Undelete accidentally trashed files
- ☒ Quickly back up your hard disk
- ☒ Defragment your hard disk for faster access
- ☒ Find misplaced files, even if you forget their names.
- ☒ Secure sensitive or confidential data
- ☒ Rearrange and organize your folders
- ☒ Make multiple floppy copies with ease
- ☒ Allocate hard disk space for multiple users

All for less than the price of some single-purpose utilities that provide only a fraction of the value.

1030 input and display

RasterOps Colorboard 324

Frame-grabbing board with separate inputs for RGB, composite and S-VHS video which are controlled by their Truevision software.

POA

RasterOps Corporation
Mitsui Computers Ltd

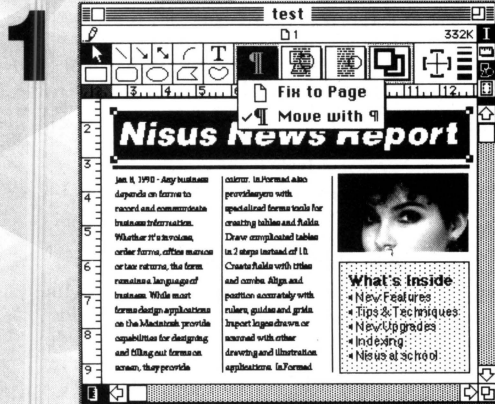

1030 input and display

RasterOps Colorboard 364

A video capture and display board that allows realtime video to be displayed in a window on top of a live application. Permits colour video signals from an (PAL) TV source to be displayed and modified in realtime 24-bit colour on a non-interlaced Mac screen. The live video appears in a window that can be sized, stretched, and moved around the desktop. The video does not cause interruption or slowing of the application that is running concurrently, because the board uses its own memory and the same processor as the Colorboard 264. MultiFinder is not required, and the board occupies a single NuBus slot. Control Panel software allows users to select pixel depths and virtual-screen sizes from 640 x 480 to 4096 x 521

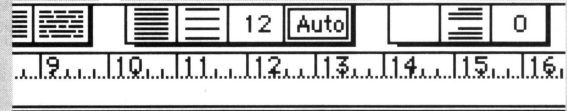

New Nisus 3.0 rules OK!

Now the best is even better! Nisus is the award winning word processor with high-level proofing, editing and writing capabilities. Nisus 3.0 continues to set standards for power and ease of use. Just take a look at some of these new features. Can you really do without the power of Nisus 3.0 in your work?

Placed Page Graphics (PPGs)

Pull in any Nisus file into your current Nisus document. Rotate it, scale it, crop it, then move it to anywhere on the page. Flow text automatically around any PPG or graphic. To edit a PPG just double-click on it. Also use PPGs to create hypertext documents. Only Nisus can do it!

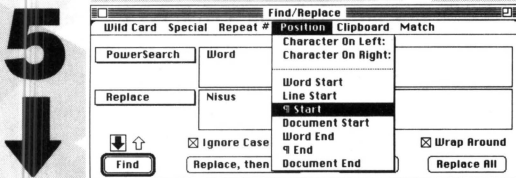

Text Ruler Options. The new Nisus text ruler includes true leading and Super Style sheets. You can even enter measurements directly into entry boxes on the ruler. Only Nisus can do it!

res including Super Style Sheets, more graphic ar
atibility with other layout applications, plus a ref
greater ease of use. Nisus includes several new fe
ling edge of word processing technology.

Non-contiguous text selection

Need to style different sections of your text at the same time. Perhaps you want to select different portions of the text simultaneously and copy them all at once. Only Nisus can do it!

Power Search.

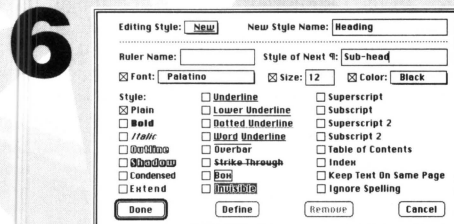

Nisus can search for patterns of characters not just literals using an incredible range of wildcard characters. Searches are also font and style sensitive. e.g., Nisus could find any number that starts with a \$ sign and bold the whole figure. It's easy to do, but only Nisus can do it!

Font Size Style Misc. Menu

Arrow
Avant Garde
Bookman
Chicago
Courier

Phonetic Keyboard commands.

Assign command key equivalents to any pull down menu, even font menus, using phonetic keyboard commands. Make Nisus emulate the key commands on your old word processor. Phonetics give you flexibility and ease of use. Only Nisus can do it!

Super Style Sheets.

Not content with ordinary style sheets Nisus gives you incredible control over formatting down to the character level. Only Nisus can do it!

AND MORE!

- Optional legal, medical and foreign dictionaries.
- Open or save in other WP formats.
- Full drawing environment.
- Automatic parentheses checking, looks for matching quote marks, and balances brackets etc.
- Fully editable footers, headers and footnotes.
- Cross referencing even of graphics and footnotes.
- Full macros with an advanced scripting language.
- Automatic back up system plus much much more!

Radius Pivot Monitor

Blending together full- and dual-page displays, it physically "flips" between portrait and landscape orientations without the need to reboot software. Its software reorganizes the desktop after 90° rotations, repositioning menu and scroll bars and moving icons to replicate their previous arrangement. Particularly useful with spreadsheets, graphics, and page layout programs.

Supports most Mac applications, has a 69-Hz refresh rate, and 640 x 864 resolution in portrait orientation. Weights are used to balance the display during and after rotation, and a specially designed magnetic shield isolates the deflection circuitry from the earth's magnetic fields. Circuitry and cooling vents optimise cooling in both orientations. Available with interface boards for the Mac SE/30 and Mac II family, and comes in a 2-bit version that offers up to four shades of grey. An upgrade kit allows users to turn the monitor into a 4-bit display with up to 16 shades of grey. A colour version of the Pivot monitor is expected in 1991.

1034 video/interactive

ColorSpace FX Board

This board accepts PAL, SECAM and NTSC composite video inputs for full 24-bit digitising and display in realtime. It also acts as a triple input, two-dimensional digital video effects generator (2D DVE) with pan, zoom, mirror, and picture squeeze effects. It acts as a line rate converter to enable a 15,625-Hz line video to run at 35-KHz, 67 frames per second on an Apple monitor without flicker. It uses the ColorSpace Ili card as the graphics display card. Separate video and graphics memory planes it allows full speed operation of the host Macintosh even during full screen, full frame rate video display. Versions are also available for the Plus and Mac SE. Multiple video inputs for composite video and S-VHS/Hi8 can be selected and switched from a DA; genlocking assures synchronisation of Macintosh graphics with these signals, and Mac-created colour overlays may be run over background video (three colours only).

\$7,495

"DiskDoubler will Dramatically Double the Storage Capacity of any Hard Drive or Floppy Disk!"

-Guy Kawasaki, Macintosh Evangelist, at Singapore MacWorld Expo, 1990

DiskDoubler is a remarkable new software program that increase the storage capability of any hard or floppy disk. You simply click on a file and select 'Compress' from the DiskDoubler menu on the Finder. Blindingly fast, DiskDoubler compresses your file by a factor of two, three or even four times.

Using a DiskDoubler compressed file is even simpler. Simply click on the file and it automatically decompresses and then launches normally.

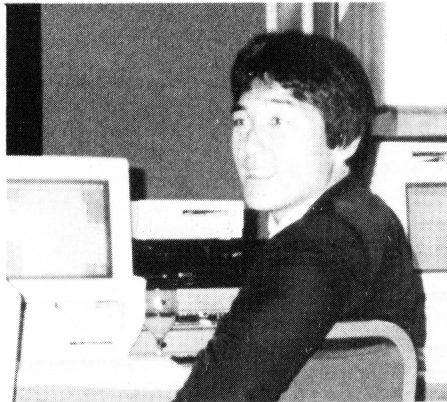

MacUser's toughest reviewer, Steve Bobker reported:

"DiskDoubler's performance is outstanding."

Bobker gave DiskDoubler an extremely high 4.5 mouse rating and pleaded for just one improvement—the ability to read StuffIt files.

Version 2.0 of DiskDoubler is now available and it automatically reads and decompresses both StuffIt and PackIt files. Easily and transpar-

ently. And that should make Mr Bobker and every DiskDoubler user quite happy.

"The savings in time and space have to be experienced to be believed."

Guy Kawasaki, special guest speaker at the Singapore MacWorld Expo held during June, 1990, gave an impressive demonstration of DiskDoubler before a audience of nearly 400 Macintosh devotees.

While demonstrating the program, Guy said,

"DiskDoubler is brilliantly simple to use and install. You just move the DiskDoubler INIT into the System folder and re-start. Thereafter DiskDoubler appears on the Finder menu bar for use at any time. The savings in time and disk space have to be experienced to be believed. This program is a really elegant piece of software, and it's cool—cooler than ice!"

Everyone needs DiskDoubler. It compresses files by an average of 50%. Many TIFF and other graphic files are reduced up to a staggering 98%. It's like getting another hard drive for a fraction of the cost.

In Silicon Valley, the home of the Macintosh, DiskDoubler has become a quiet legend in it's own right. It has become a best-selling product based entirely on recommendations from satisfied users.

"DiskDoubler is elegant and cool—cooler than ice!"

Buy DiskDoubler today and join the thousands of experienced Mac users who've discovered that there's no easier and more economical way to increase the performance of their disk drives.

1041 impact and thermal printer

ImageWriter II

A 9in, 240 character per second dot-matrix serial printer which allows a high resolution image produced on the Mac screen to be transferred directly to hard copy using the Mac's graphics, fonts, sizes and styles. Continuous or single sheet feed can be used allowing use of plain paper or letterheads, mailing labels, and so on. Connects directly to the Mac and can print in three modes: Draft, Faster, and Best. Can print up to seven colours using appropriate colour ribbons and software such as MacPalette, it can also be shared by other Mac users with AppleTalk. Optional sheetfeeder and AppleTalk card (\$150) are also available.

n/a
Zytech

1050 storage devices

PLI RAM Drive

A drive with 0.05ms access time. As PLI says it is "Not 500% faster, 500 times faster." And a deal more expensive. Does not provide long term storage with the Mac turned off; and if power fails, you lose what's in there at the time. It is intended to be used only as operational storage, with applications and files loaded in as you work with them. Requires no

formatting, and obviously fragmentation is not a problem, so it is always fast. In sizes from 8Mb to 160Mb, in the same box as the PLI Removable hard disk. Contains banks of fast RAM chips, controlled by a dedicated 68020 processor.

ACA Pacific Pty Ltd

1051 floppy and removable

Apple FDHD Drive

Also called the SuperDrive, it is capable of reading and writing MS-DOS, ProDOS and Macintosh disks. Both 720 K and 1.44Mb MS-DOS disks may be inserted directly into the drive and used by the Apple File Exchange. Standard Mac 400K and 800K disks work as normal in the drive. However, to format a disk to the 1.44Mb standard requires HD disks. It is also available for the SE and Mac II. The price of \$695 is for the external version. To put one on a Mac II requires a ROM swap at a total price of \$1,050 for the ROMs and an internal drive, an SE requires upgrading to an SE/30 before fitting the drive.

\$695

Apple Computer Inc
Apple Computer Australia Pty Ltd

1051 floppy and removable

Apple PC 5.25in Drive

For Mac SE and Mac II users who want to use data created in MS-DOS format. Reads and writes files back and forth between 360K DOS disks and Mac. In conjunction with an MS-DOS co-

processor card, you can even run DOS applications on your Mac. This drive requires the Mac SE PC Drive Card or the Mac II PC Drive Card to operate.

Mac SE, Mac II \$495 plus \$245 for the card

Apple Computer Australia Pty Ltd

1051 floppy and removable

DaynaFile

360K, 1.2Mb 5.25in; and 720K, 1.4Mb 3.5in floppy drives. A SCSI-based 5.25in external "smart" disk drive that allows Macs to read and write data files directly from an IBM PC-compatible disk. IBM files can be accessed and used as though originally created on a Mac desktop, and Mac files can also be stored. Incorporates a Finder-level interface so you can open a file or sub directory by clicking the mouse. Optional file translation software (DAY-999) provides automatic conversion of file format and contents from one application to another. Units can be configured with one or two IBM-style disk drives in any combination. Also useful for converting files from one IBM format to another (e.g., 360K drive to 1.2Mb/AT drive).

\$Various

NetComm [Australia] Pty Ltd

1051 floppy and removable

Deluxe Option Board

5.4

Turns an IBM internal 3.5in drive into a dual format IBM/Mac drive. To transfer data from a PC format to a MAC format, simply insert a diskette into the PC's 3.5in drive, format it as a Macintosh disk, and copy a file to it. The same disk can then be inserted into a Mac to be read or copied. The reverse procedure is also true. An easy, inexpensive way to transfer data between PCs and Macs.

IBM PC/XT or AT or compatible \$290
with an internal 3.5in drive.
Halldale Technologies

1051 floppy and removable

DOS Mounter

1.1

A software product that allows a Macintosh to send, maintain, and save 3.5in disks from an IBM PC or compatible computer. It works by "mounting" the DOS disk just like any floppy inserted into the Apple SuperDrive so that files can be transferred easily.

You Can Afford A Mac Printer

The IceCable

You now have a choice

No more are you restricted to Apple's Imagewriter – and it's pricing. With the IceCable from Australia's own Automatic Ice Co, you can now use your choice of any Epson or compatible parallel printer on your Macintosh 512, Plus, SE or II.

Works with most printers

Any printer that is Epson compatible. And that includes most Star, Oki, Panasonic, Brother, and Toshiba printers. Plus many others.

Fill your world with colour

The IceCable works in colour too. Plug it into an Epson compatible colour printer, such as the Star NX-1000CL, and you have a colour Imagewriter compatible printer.

Easy to use

The Icecable needs no special software or expertise to use. It uses Apples own Imagewriter printer drivers, so it's as easy to print with the Icecable as it is with the Imagewriter. The IceCable just plugs directly into your printer in place of a cable.

Available from:

MICRO-EDUCATIONAL

256 Darby St, Newcastle NSW 2300
Phone (049) 26 4122 Fax (049) 26 2194

Epson, Star, Panasonic, Apple, Imagewriter, Brother, and Toshiba are registered trademarks of their respective owners. Copyright © 1990.

24 pin printing too

The IceCable even works with 24 pin printers such as the Star LC-2410. When using a 24 pin printer, the printer will emulate an Imagewriter LQ. At way below the cost of the LQ.

Thousands of satisfied users

Thousands of IceCable's have been sold across Australia since its release. In schools, homes and businesses.

Money Back Guarantee

We're so confident that you'll love the IceCable that if you're not completely satisfied, we'll give you your money back. Return the IceCable in original condition within 10 days of purchase for your money back. No questions asked. So what have you got to lose?

Order Now

The IceCable is available directly from Micro-Educational for \$130 per unit, plus delivery by post for \$5, or \$13 for delivery by courier.

Liaison

2.0

A network bridge based entirely on software, with no dedicated hardware needed. It will run on any Macintosh from the 512Ke and supports LocalTalk, Flashtalk, Ethernet and can bridge three zones at once. Performance can be affected by CPU-intensive foreground tasks. It is actually two packages: Liaison, only available to licensed users; and Liaisonet, available to anyone for private sessions with a licensed user. It allows you to hide certain zones on the network; and to dial into or out of your office network, share modems (only for Liaison use), and establish either group or private remote network connections. Although not copy protected, it ensures each copy of Liaison on a network is unique. Use Liaison from within any application that allows access to DAS; can also be configured to connect to a given site on start-up. Requires a full duplex link (send and receive concurrently) and a V.32 standard (9600 baud per second full duplex) modem is recommended. Comprehensive on-line Help; a small manual.

V.32 modem \$385
Infosphere Inc
Tri-Data Communications

1080 communications

Covers the connection of computers without the benefit of "marriage" by network. "Simple" software provides modem control and connection to bulletin boards or personal computers, and often provides more services than complex software designed to connect to rigidly structured mainframes. In the simple category, software must support your modem, providing adequate file transfer protocols. Mainframe connectivity requires close planning to match the communications protocols and data formats of your office mainframe, and many demand more.

1080 communications

MacCHUCK

1.5

IBM PC control/echoing in a window on the Mac. It supports cable/AppleTalk connections, file transfers and colour. Comes with Mac and 3.5in and 5.25in PC disks, and serial connecting cable between the Mac and PC/AT. Supports the colour character graphics screen of the PC (not CGA/EGA/VGA), and allows both machines to be run at once; either keyboard may be used for the PC. MultiFinder aware, plus screen capture and files transfer facilities. TOPS-compatible with AppleTalk, even when setting up TOPS on the PC via MacCHUCK.

Mac 512K \$249
Vano Associates, Inc
Oxford Systematics

1080 communications

MacLink Plus Translators

4.5

Mac-PC file sharing software, with cable. Offers 150 file translators which extend the translation capabilities of the Apple File Exchange Utility (AFE). Each translates data from a DOS application to a similar application on the Mac (for example, WordPerfect to Microsoft Word, keeping formatting, indents, tabs, fonts, and styles intact). Files can be transferred "unformatted" as ASCII or binary text. Links through direct cabling or via modems. Able to translate files between Mac floppies or hard discs; MS-DOS disks on Apple PC 5.25in drive driven by the Mac; MS-DOS disks on Dayna File 5.25in or 3.5in DOS disk drives for Mac. Versions exist for IBM PCs (or compatibles), Wang, or Remington (NBI), and DEC systems.

1090 networking

AppleShare

2.01

A network server that implements the AppleTalk File Protocols (AFP). Runs over AppleTalk, PhoneNet and Ethernet cables. Requires a dedicated Mac Plus, SE or Mac II with a hard disk, and in return allows for sharing of files, applications and folders, and transparently serves as a base for electronic mail, print spooling and other applications. Users and groups are assigned access privileges: by owner only, by group or by everyone, with options to see folders, see files or make changes. Users who do not have access to a file will not know of its existence. Drop Folder is a tool which allows certain users to put files in, but not see them or take them out. Software is available for LaserWriter print spooling over the network, as well as software to admit PCs with AppleTalk cards on the network.

512K Mac, 20Mb hard disk \$1,217

Apple Computer Inc
Apple Computer Australia Pty Ltd

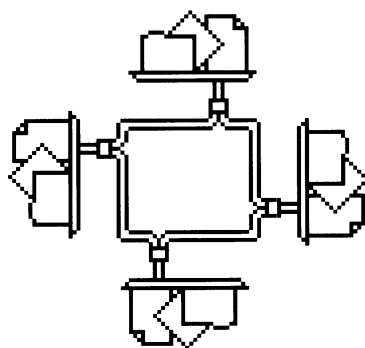

1090 networking

AppleShare PC

Lets users of IBM PCs and PC-compatibles share information on an AppleShare file server with Mac users on an AppleTalk network. Gives an MS-DOS user the same ability to access folders, documents, applications, and storage space as a Mac user. Using the AppleShare server from an MS-DOS PC is like using a local disk drive. The AppleTalk PC Card required with AppleShare PC also makes it possible to print documents that have been created with MS-DOS applications on the LaserWriter.

\$249

Apple Computer Inc
Apple Computer Australia Pty Ltd

1090 networking

Networking software enables many users to share data and/or other devices over a permanent cable connection. We include file servers, print spoolers, modem servers and device servers, bridges, terminal emulation boards, and so on, with the exception of e-mail (listed separately). Also includes hardware that does the same job as software, because the two are often interlinked. Network management is a black art, so seek advice.

1090 networking

AppleTalk

5.1

An economical office network environment providing each Mac in the network with access to each other and to such peripherals as hard disks, printers, and laser printers. Up to 32 Macs can be connected to the system. The AppleTalk network includes carrier sense detection, multiple access with collision avoidance, and allows Mac to Mac communication. Said to be the easiest to install of all PC networks, because all Macs have the protocol/firmware built in. \$98 per connection. Extended cables (10 meter) \$81; Custom 100 meter Kit \$1,075.

1090 networking

PhoneNet Connector

(Building block components: PhoneNet, PhoneNet CheckNET, PhoneNet Connectors, and PhoneNet StarController.) PhoneNet is a network which utilises AppleTalk standards, taking advantage of unused wires in existing phone lines, allowing you to connect an AppleTalk device wherever there is a phone jack. Other features: flexible network

arrangements and a range of 3,000 feet (up to 36,000 feet with a StarController - see listing). StarController, CheckNET and TrafficWatch software can be used for monitoring and managing a large-scale AppleTalk network. PhoneNet CheckNET: a desk accessory that allows users to view all other active network users and to check the status of all network printing resources. Users can search and sort to find other users or particular devices, even across zones. Price covers 10 user licences. PhoneNet Connectors: an adapter cable that allows PhoneNet connectors to be mixed with an existing AppleTalk network. Extends network up to 4,000 feet on inexpensive twisted pair wiring, and can be configured in a daisy chain, backbone or star topology.

QuickMail

2.2

Provides mail and conferencing on a network with mail boxes which operate

whether a user's Mac is switched on or not. Allows mailing from remote sites or over network bridges, and mailing via the nearest printer to those with no computer. Password security, network administration, and software bridges are provided. Works on AppleTalk with its included QuickServer software, or else over TOPS or AppleShare servers. QuickServer works in the background. Consists of seven programs with the option to install and use only what is needed. One of these is QuickForms, for creating or editing message formats. Version 2.2 provides users with directory services (QuickMail NameServer); on-line addresses and gateways are continuously updated and stored with imported address lists, and available to users through the "Find" menu. QM Menu adds a mail menu to any application, providing the only universal mail integration yet released for Macintosh. You can enclose and send documents from within any application. QM-QM Bridge allows users with a modem to communicate with any other QuickMail site, without the user having to know or perform the dialling after the recipient's address has been entered once. This, together with QuickMail PC, extends QuickMail's lead as the most wide-reaching e-mail package for the Mac. QM Recorder works with Farallon's Mac Recorder to record and attach voice recordings to mail messages. Speed has also been improved. (That was necessary.) XCMDs for HyperCard, Wingz and 4th Dimension should be available, to permit developers to create external commands which interface to QuickMail. Available for 5 (\$470), 10 (\$695) and 50 (\$3,085) users.

TOPS InBox/Plus

3.0

An easy-to-use e-mail system. It supports up to 20 mail boxes, letting both PC and Macintosh users exchange memos, messages, and files. InBox can run on any file sharing network including NetWare, 3+, LAN Manager, TOPS and AppleShare and on nothing more than Ethernet cabling, LocalTalk cabling, or phone cabling. Can be configured for use with or without a dedicated server. Supports up to 20 Macintosh and PC users. Tops InBox Plus (\$1,499) supports up to 100 users, multiple message centres and central administration.

Software not otherwise specified

2010 data management

4th Dimension

2.0.1

Relational and multi-user database package. Lets you create custom made database applications with pull down menus, dialogue and alert boxes. It contains a graphic interface, a rich programming language and is flexible enough to take full advantage of the graphics, networking and colour features in custom applications. Permits 100 files opened simultaneously. Each database can have up to 99 files of up to 511 fields, with 511 subfields per field, an unlimited number of links between files and up to 16 million records. Each field can be either alpha (80 character limit); text (32,000 character limit); real (19 digit accuracy); integer (up to 32,767); long integer (up to 2,147,483,647); date; picture; or subfile (up to five levels deep).

Search capabilities include multiple conditions, wild cards, ad hoc queries, and programmable searches. Other features include: sorting on up to 30 fields, automatic data validation, hierarchical password system with up to 32,000 levels; and the ability to create your own filter to convert data for any type of computer or peripheral device. It can import or export data in SYLK, DIF and text formats from other Mac, or IBM PC and mainframe applications. Its procedural programming language contains over 200 built-in routines and operators; it adds capabilities like manipulating sets, communicating through the serial port, and performing arithmetic operations on pictures. External routines written in C, Pascal or other language can be added to provide additional power. Comes with a database repair utility. The runtime version also works on the Mac 512Ke.

2010 data management

dBase Mac

A fully relational database manager for the Mac. Supports the Mac interface with easy relational database design formats. Provides the user with power programming available through user-definable pull-down menus, complex data queries, and data input screens with buttons and check boxes. ASCII text files

can be ported into dBase. Up to 36 files can be opened simultaneously with unlimited number of records per file and a maximum record size of 32,000 characters long. Fields may be defined as text, numeric, dates, logical, choices or graphics. Maximum file size and number of records is only limited by the available disk space. Input hierarchies may be defined to allow data entry into multiple files at once. Creating a relation between two files is as easy as dragging a field icon between them. Other features include: custom report and label generation without programming; structured and unstructured data; text and graphic images; automatic data format verification.

Deft CASE Tool

3.1

This CASE tool features a fully-integrated set of editors for producing data flow, entity relationship and program structure diagrams, as well as designing screen and report formats. A central data dictionary integrates all system components. Multi-user dictionary provides users with concurrent access to the data dictionary. The Design Controller analyses diagrams for syntactical and logical corrections. Supports Oracle, Ingres, DB2, Informix, Sybase and RDB. Personal Deft (single user) features a fully integrated editor set and a common data dictionary allowing data attributes defined in one diagram to be used in another. Upgradable to multi-user. Deft's Oracle and Ingres Gateway products translate compiled designs into the host application's development environment, allowing the generation of SQL statements directly from the Deft design. The Gateways also permit an existing RDBMS to be reverse-engineered into Deft and the forward-engineered into a different RDBMS.

Double Helix

3.0

An icon driven, object-oriented relational database. The non-procedural dataflow language is particularly easy to master by non-programmers. Unlimited: fields, records, layouts, users/passwords, file relationships, icons, open windows, indexes, number of reports per file,

search/sorting (128 sort levels), files open at once, total files in database. Field length: 32,000 characters. Supports text, numbers, Boolean, date/time, and picture data types. Over 100 visual calculation tiles for arithmetic, trigonometric, date, and text. Boolean, conditional, string and logical operators. Too many features to list. Runtime versions, VAX versions and full support available.

Mac Plus, SE \$700
Odesta Corporation
Odesta (Australia)

2010 data management

Double Helix MultiUser

3.0

The MultiUser Kit instantly allows any Double Helix 3.0 application to run on an AppleTalk or EtherTalk LAN. The information or data resides on one Macintosh, called the "host", while the other Macintoshes act as "guests". The host knows what is happening at each guest at all times. Thus, when a change is made at one workstation, it is transmitted to the host, and all the other guests know about it.

You don't need to use a file server like AppleShare or TOPS. The kit includes software for four workstations; software for additional stations is available. Claimed to be the only Macintosh multi-user system to incorporate true database server network technology rather than fileserver technology (which requires the time to copy files back and forth between machines), making it the fastest multi-user system on the Mac.

Includes Double Helix 3.0's totally visual interface, easily modified structure, ad hoc queries, database triggers, sequences, buttons, data protection and reliability features such as AutoSave and Logging. Without modification, any application runs on DEC's line of VAX computers using Helix VMX.

Key Features: Each user has their own custom pull-down menus with complete access controls so that information is share on a need-to-know basis; complete data validation to prevent errors or unauthorized entries; complete control of viewing, adding, deleting, change or printing information on a per form, per user basis; automatic save and automatic external log file to prevent any data loss, even in the

case of system failure; uses multi-threaded searches to minimize query time.

MaxSoft Pty. Ltd.
MaxSoft Pty. Ltd.

Informix SQL and 4GL Family

A fourth generation programming language designed for database application development. It offers a ten-to-one programmer productivity increase over more traditional third generation programming languages such as C and COBOL. Two additional tools, the Informix-4GL Rapid Development System and Interactive Debugger reduce application development time through the use of a pseudo-code system and a facility for interactive debugging during programming. A range of Informix tools expand the versatility of this system, such as: Informix-SQL: A menu driven application development tool for end-users and programmers. It provides easy access to sophisticated application development tools, context-sensitive Help and data management utilities. Full featured applications can be built using Informix-SQL. For Unix platforms. Informix Sterling Mainframe Access: Gives Informix users access to information on IBM mainframes through a joint Informix-Sterling Software Inc agreement. Informix Online: A multimedia DBMS designed exclusively for Unix environments. Users can store large objects such as spreadsheets, word processing, digitised images and voice as ordinary fields in a database record. Thus, previously disparate pieces of information can be organised and accessed through SQL. Informix Network-Ready Tools: Supports DOS network standards including Novell NetWare, 3Com 3+, IBM PC LAN Program, and AT&T StarGROUP, giving users the ability to share information from Informix applications. Informix Net: Connectivity software that provides database applications in a client/server architecture. The front end resides on a DOS, Unix or Mac workstation, while the actual database engine is on a Unix server.

Supports TCP/IP and StarGROUP.

Informix-Quickstep: An interactive report generator that enables users with no experience in SQL syntax, to build SQL database queries and custom reports through an easy-to-use interface. Optionally generates Informix-4GL code. Informix-SE: An SQL database engine for smaller MIS organisations that require light transaction processing for more traditional decision support applications. Informix-Star: Distributed database software enabling users to access and manipulate data from Informix-Online databases on multiple, remote servers. A/UX 1.1 POA
Informix Software Inc
Keyway Computers

MacList 1.5

DA list manager and spreadsheet-like database. Sorts up to three levels deep and searches for any string of characters. Converts list entries to SmartAlarms; pulse and tone dialling via modem, "calculate now" function; additional font styles and sizes stored in "remember Settings", enhanced "Search" includes "contains" statement to find text in any field, not just the first; "show All" redisplay whole list; "Sort" operates through pop-up menus.

All Macs POA
JAM Technologies
JAM Software

MARS 1.5

A multi-user archival and retrieval system for storing documents, replacing microfiche. A typical MARS system would use the Apple Scanner or a Fujitsu high speed scanner, multiple on-line Panasonic WORM optical disks, and the Palantir Recognition Server OCR for capturing documents and storing them for ultra-fast retrieval.

Micro Dynamics
Delairco

Membership Manager 1.3

Comprehensive mailing/billing system for organisations such as RSL clubs. Handles cash receipts, membership status and accounts, publication sales, stock control, and conference booking and accounting. Also handles general accounting. Multi-user version (up to five users).

\$9,000
Australian Database Accounting
Diprose House Consulting

Microsoft File 2.0

A "flat" (non-relational) database filing system. Places information on flexible forms. Search, sort and sum on any field. Simple maths operations, averages, counts and logical operators. Can be used with word processors to produce form letters from File address lists.

\$325
Microsoft Corporation
Micro Australia Computer Products Pty Ltd.

Odesta Document Management System (ODMS) 3.0

Takes care of the procedural and logistics side of data management. A version for the publishing industry, for example, copes with deadlines, sign-offs, and snapshots that allow managers to ascertain how a project is progressing. Can pre-define where a document will go over the network when users finish with it, and it moves all relevant documentation with it to the destination, regardless of which and how many applications created the various pieces of "paperwork" which comprise the project. Thus, without leaving ODMS, you can open a file: as you open your project "parcel", the component files appear in a window with their original icons.

POA
Odesta Corporation
Odesta (Australia)

Omnis 5

A programmable multi-user relational/hierarchical database that can be used for developing turnkey business applications with very high volumes of data entry. Links to PC-compatible version (also offers SQL and Oracle interfaces). Includes Omnis Express tools for automating the process of building libraries or applications, working menus, report generation, etc. Offers 2,000 formats per file, of unlimited size; field names up to 15 characters; 60 files open simultaneously; maximum file size: 2,560Mb. Features include: full colour graphics included in window design or stored in the data file; text data displayed in any font or colour; HyperCard-like buttons; user-defined menus; WYSIWYG reports; variable length records, data from different files can be displayed on any window, and more. Comes with proprietary XCMDs and XFCNs which allow HyperCard, SuperCard and MacroMind Director to query Omnis 5 databases either locally or on a network. Provides HyperCard access, "hot button" areas, visual database capabilities and greater layout flexibility; can handle colour PICT graphics. Data from different files can be displayed in any window. Provides "ghost" lines for developers to ascertain the edge on smaller screens. A set of internal commands provides communication with CL/I database servers. Arrays created with older versions of Omnis are not necessarily compatible with Omnis 5, but can be converted.

Omnis 5.

Corporate database management with all the right connections.

Like most companies, your corporate databases are probably spread over a number of different sites on different microcomputer workstations.

Now you can truly benefit from this valuable corporate information resource. Omnis 5 is the corporate database and applications development system that can make all the right connections - with Apple Mac, IBM and compatibles. Each version of Omnis 5 shares a common data and applications file structure and a unique multi-window environment to give easy access.

Omnis 5 not only allows you to standardise mixed microcomputer workstations at different sites but also to access data from mainframes and minis concurrently. It even supports optional links to ORACLE and CL/1 SQL dataservers.

The system is fast (accessing one from 500,000 random records in 0.1 sec) and it is powerful (updating 60 separate files simultaneously). Its programming language has over 200 commands which are entered by a unique 'point-and-click' technique.

What's more, Omnis 5 is truly multi-user – allowing up to 451 concurrent users on a network access to the same (or different) databases from Macintosh, DOS and OS/2 workstations. Applications can be ported seamlessly between different machines on a mixed network.

So why not discover how to make the right connections for yourself and invest \$50 in our fully functional demonstration pack (refundable against your purchase of the full system).

To order or for further information on the Omnis product range phone (075) 395 422.

Heizer Software Catalogue

Catalogue of fully debugged custom applications and special utilities. Some examples (all prices in \$US, and you can only obtain these direct from Heizer): Small Business Accounting System \$79, House Construction Cost Estimator \$79, Aviation Maintenance Log \$7, Mailing Label Macro \$15, Business Plan \$15, Organisation Chart Maker \$8, Bankruptcy Prediction \$15, Economic Ordering Quantity \$25, Psychometry \$15, Storage Hopper Designer \$25, Structural Steel \$12, Swine Enterprise Analysis \$40, Fertilizer Cost and Payback \$15, Sprayer Calibration \$14, Vitamin and Mineral Database \$5, Rule of '78 \$10, Photographer's Assistant \$50, Horse Race Analyser \$15, A History of Nuclear Weapons \$33, Oscar Nominees \$15, Chinese Clip Art \$30; tutorials for Excel, stacks and utilities for SuperCard and HyperCard. 56 pp. If you are after a huge selection of HyperCard stacks, get hold of Heizer's catalogue. Less well known, and certainly worth exploring, is Heizer's enormous collection of Excel utilities. Sold as canned macros, these provide ready-made Excel templates for most business purposes, and at the cost, will recoup you the money many times over in saved in-house development time. A quick round robin revealed that relatively few make use of the macros in Excel, and those who do, have a limited range of completed applications. The principals of Heizer said they were happy to sell directly to Australia, and will not appoint a distributor — the low cost of their products does not permit the inclusion of a middleman, so if you want these, go directly to Heizer.

C•A•T III 3.0

A pre-programmed, fully relational database (née "Contacts, Activities, Time") that handles form letters, projects, accounts, timed messages, tactics, follow up and more. The program dynamically links phone calls and meetings with a list of names from an address file. Designed for professionals such as sales people, brokers, bankers, and executives who maintain elaborate lists of clients and contacts. Offers three major integrated components. The first is a list of companies and contacts; from this you build custom lists. Second is the activity list where you define activities and link them to contacts. Third is the calendar, which lets you view selected activities over time. Price varies with number of users. Upgrades available.

2060 spreadsheets

4D Calc

Not a replacement for a full spreadsheet, 4D Calc adds another dimension by its tight integration with a fully relational database, 4th Dimension. The spreadsheet can be used as an area on a 4D layout, as a document in an independent window, as a field in a record, or as a template which is reflected in each record. The worksheet size is 8190 rows by 256 columns, comes with over 40 inbuilt functions, over 70 procedural commands, variable row height and column width, search functions, and numerous options on the presentation side.

ACI France
Softies Pty Ltd

2060 spreadsheets

One of today's major business tools, spreadsheets range in power and complexity. The same caveat as for buying word processors should be heeded here: know your needs. Make sure you are not paying money and sacrificing speed for features you will never use. Conversely, if you need power, and the "presentation" quality of the spreadsheet material is important, a number of packages now offer much improved data formatting, data import/export, and output capabilities.

2060 spreadsheets

Full Impact 2.0

Intended to compete with Microsoft Excel, Full Impact combines a powerful spreadsheet with built-in text editor and graphics tools for easily mixing numbers, text and graphics in the same document without resorting to other applications. The spreadsheet offers a matrix of over 500,000 cells (2048 rows by 256 columns); virtual memory to manage worksheets larger than available RAM; ten supplied chart types, all hot-linked to the data; 'zoom' facilities (a miniaturised preview of up to 64 pages of a spreadsheet document before printing); and two levels of password security. Eight worksheets can be opened at a time. Version 2.0 imports and exports Excel 2.0 files, and import Excel 1.5, along with numerous other formats; it also adds 3D colour charts which can be moved by dragging, an expanded FullTalk application development language and report generator, customisable icons for frequent commands.

All Macs \$650

2070 numerical analysis

DeltaGraph 1.5

A graphing/charting package that comes attached to a useful spreadsheet. Offers a range of graph options - bars, pies, lines, surfaces, and a table chart. Permits rotate and temporary rotate, and illustrations on the graph itself or its background. Data by direct entry; "warm" linked to Excel; opens Cricket Graph data files; reads WKS, SYLK, and tab- or comma-delimited text. The spreadsheet comes with an extensive range of functions. Imports and exports to Illustrator, PICT, or EPS formats, although its shadings, symbols, and fills may not be accessible to the export application. Claims to support QuickDraw plotters, but doesn't specify which ones. The manual suggests the chart style to suit the type of data, and illustrates the construction of each. Version 1.5 will work with ATM. Provides on-line Help, monochrome and colour sample documents, and an editable font of DeltaGraph symbols. Supports users on CompuServe. MultiFinder and Mac II friendly.

Mac Plus, SE \$349
DeltaGraph
Trio Technology

2070 numerical analysis

FASTAT 2.1

Aimed at the non-specialist market, it features the tools for exploratory data analysis, allowing the linking of graphs and the editing window, and of graphs with other graphs. It offers multi-way tables, two "factor analysis" algorithms with various automatic rotation options. Provides online explanations of statistical terms; users can edit Help files with a text editor or word processor and add in what's missing (useful in an educational context). It only handles 50 variables in a file, does not support single precision files, has limits in variable naming; lacks flexibility in the way multiple output is displayed. Requires a hard disk; Mac II version can use co-processor. MultiFinder-friendly.

Mac Plus, SE, II \$350

SuperANOVA 1.0

General Linear Modelling for the Mac. Features: ANOVA, ANCOVA, MANOVA, MANCOVA. The program supports simple, multiple and polynomial

2080 accounting

Accounting software seems to fall into two groups — single module and multi-module — based on the depth required. The simplest are designed around a cash book system, for individuals or small businesses which do not need a great deal of complexity and analysis. The next are designed around a general ledger model, and usually attach separate ledgers for other functions (invoicing, payroll, inventory) and are better suited to larger businesses with better reporting and analysis facilities, but requiring more accounting expertise to set up and administer. This category excludes spreadsheets.

regression, repeated measures, effects and general graphs, unlimited factors, balanced and unbalanced models, and a range of post hoc tests. A full-featured drawing environment is available for creating presentations.

Ist Dies Ein Volks Scanner?

CAERE®

The Ultimate

TYPIST

What if you could have an electronic assistant, capable of typing 500 words per minute, while sitting quietly at your side, and taking up no more space than a telephone?

Sound like a great idea?

That idea is now reality with the *Typist*™ from Caere.® Designed to be *the ultimate typing machine*, the *Typist* is capable of reading any text, no matter what style font, font size or column format, and entering it directly into your Macintosh® or PC compatible word processor, spreadsheet or

database – without interruption. Caere, the company that pioneered Page Recognition with *OmniPage*® has now developed the world's most personal scanner.

The *Typist* works like your own personal assistant, capable of typing 500 words per minute – as well as numbers – entering it directly into your software application just like a keyboard – only faster.

The *Typist* is more than a typical hand scanner, generally suited to scan graphic images, but limited when it comes to text. As the world's most personal scanner, the *Typist* is a sleek, ergonomi-

The Typist lets you accurately insert text or numbers directly into a PC compatible or Macintosh word processor, spreadsheet or database – simulating keystrokes effortlessly.

Typing Machine.

cally designed peripheral that requires no special training or expertise. Select text or columns of numbers from any document, and the *Typist* enters your selection directly into your word processor or spreadsheet in whatever format you happen to be using – fully simulating your keyboard in every way. Scan up to 2 column inches per second, and the *Typist* will stay fully aligned – even when you scan rows and columns *sideways*.

Think of the possibilities.

Use the *Typist* as your very own *personal* assistant. Enter rows and columns of numbers from business journals or periodicals, directly into your most critical documents, including spread-

sheets. Develop business reports, presentations, legal contracts, or desktop published documents in a fraction of the time. Further enhance your reports and presentations by incorporating graphics or photo images – the *Typist* makes it easy – improving your productivity whatever the assignment.

To learn more about the *Typist* and how it can be of assistance to you, contact one of Caere's participating dealers. Caere, the Complete Recognition Company.

2091 word processing

AccuText OCR

Performs intelligent character recognition using artificial intelligence to increase scanning accuracy and capture page format information. It can recognise text in a wide variety of fonts and character sizes from 6 to 24 points, translating scanned documents into WP files that include page format information, such as column margins, paragraph indentation, indented blocks and tabs. The program also recognises character size changes greater than 2 points as well as attributes like italics, underline, superscript, and subscript. The program processes

graphics in the same pass as text, generating TIFF, PICT or MacPaint files for each scanned image in resolutions from 75 to 400 dpi. It can produce binary bitmaps for line art and offer two different screening methods for grey scale images. AccuText can output text in Microsoft Word, Excel, MacWrite, or ASCII format. The program also processes multi-column documents, producing output in galley format for easy editing. It supports a variety of scanners, including XIS/Datacopy, Apple Scanners, and HP ScanJet.

MathType 2.1

A mathematical equation editor that is completely intuitive and easy to use. Automatically sizes, spaces, and positions symbols and uses the correct typeface for standard function abbreviations like log and sine. Can be run as a desk accessory or as an application; works with all word processor or page layout programs.

Any Mac \$270
n/a
Dataflow Computer Services Pty Ltd

2091 word processing

Microsoft Word 4.0

A word processor with page layout features. Users can configure the application itself: a Short Menu option contains the basic formatting for the word processor; the Full Menu offers a broader range of options. Add or subtract items in the Font and Format menus, and define or add styles and other functions to a Work menu.

Features include an intelligent spelling checker (UK or US), a 9-level outliner, hyphenation, and the ability to create a Table of Contents or Index. Paragraph formatting includes special controls like Keep Lines Together, Keep With Next Paragraph, and Page Break Before. Paragraph numbering is available, also "framing" a paragraph. The side-by-side paragraph format is useful for page layout, although you can still only edit in single-column mode. The editable Page Preview mode shows the overall page layout

including multiple columns, headers and footers and other formatting options which may not be visible in the normal editing window.

Other features include Search and Replace with wild cards on any character including formats or control characters, and a mathematical typesetting language. A Glossary allows you to insert frequently used words and phrases with a single keystroke. A mail merge facility automates form letters. Most common printers are supported. Offers a wide foreign file import/export range, as well as more complete table creation; text flow around graphics (but not irregular shapes); automatic linking with Excel and Mail; colour support; and improved column handling. Upgrade \$130.

Micro Australia Computer Products Pty Ltd

2091 word processing

Nisus

3.0

Among the most versatile, feature-laden and easy-to-use word processors at the high end of the market. Very efficient with large documents. Includes its own graphics environment. Features include footnotes, hyphenation, split windows, over 300 levels of Undo, Set Marker function, auto-backup (to nominated folders), mail merge, search-and-replace (stylistic and colour attributes included), British or US dictionary and thesaurus, drawing tools, full graphic control, pre-view, style sheets, Get Info option (for word, line, paragraph, and K-byte count, with Fleschman reading level noted), and more. Incorporates a powerful yet simple macro language, search-and-replace using the "grep" syntax from Unix, or PowerSearch (use menus to construct the grep command). Version 3.0 has a "Place" feature, non-contiguous text selection, power search, text ruler options, style sheets with paragraph and character styles, improved mail merge, extended keyboard support, and an expanded dictionary/Thesaurus with 116,000 words. Specialist dictionaries available. Any other application can read Nisus files as ASCII text, even when not saved as such; Nisus reads Word 4.0 and writes Word 3.0 formats.

Mac Plus \$530+
Paragon Concepts
Trio Technology

2091 word processing

QUED/M

2.0

A powerful text editor without style/formatting capabilities, originally designed for programmers. Extremely fast, faster than all Mac word processors. It lacks the "finish" of commercial word processors although it offers greater flexibility and power than most. It features a highly developed find/replace language (search for patterns of characters, not only literal matches), also a special macro language for automating text editing functions. The engine of QUED/M was used for Nisus (see separate listing).

Mac Plus, SE \$249

Vantage

A "turbo" editing and text processing DA featuring multi-window editing (up to 32 windows simultaneously) and macro creation. Imports text from multiple formats. It has an interactive spelling checker, a user-specific dictionary, forward and reverse alphabetical sorting, creates columnar formats, and provides statistical information on each window.

\$160

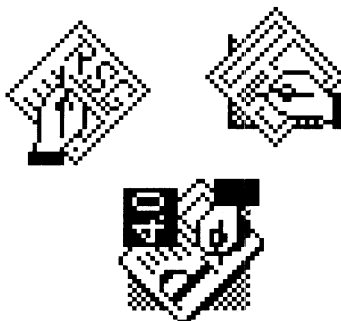

Preferred Publishers, Inc

Reliable Australian Distributors Pty Ltd

2091 word processing

WinText**2.5**

A full-featured word processor which, together with WinKits for additional languages, permits writing in a foreign language or even several foreign languages simultaneously. The language choice is a style setting, similar to bold, point-size 12, or blue-coloured text. It can be incorporated into a style sheet. The search editor, hyphenation and inbuilt spelling checker are multilingual. Unfortunately, there is only one English language setting, disallowing mixed US and British spellings. Handles fifteen languages: English, French, Greek, Russian, Spanish, Italian, Portuguese, German, Dutch, Bokmål, Nynorsk, Swedish, Danish, Icelandic and Turkish. The British English and French dictionaries are included, but those for the other thirteen languages must be purchased separately. WinKits are also available for other languages including Hebrew, Arabic, Japanese and Chinese. These contain everything necessary for word processing in these languages, including a WinStarter (the appropriate System, Finder, etc.), a dictionary, self-adhesive labels for your

keyboard, and a set of laser fonts. It does not matter whether the language is right-to-left or left-to-right, Romanic or non-Romanic, WinText allows you to mix it with other dissimilar languages and often in the same paragraph. Can calculate - not merely typeset mathematical symbols, but actually calculate like a spreadsheet. Word processing features include EdiMath; an inbuilt cell formula system; mail merge; auto-save; revert to saved; synchronised scrolling; and the automatic showing of fonts in their own style in the font-menu. Problems include no multiple columns, or word count, limited range of file formats it can open and save (MacWrite, RTF or Text Only formats), and it can be slow. There is no provision for automatic footnotes, macros, split-bars, glossaries or an inbuilt thesaurus. However no other program offers so many languages and the ability to simply and efficiently mix and match between them. Copy protection: key-disk; limited HD installations.

DesignStudio Separator

Annexe to DesignStudio for producing full-page colour separations direct to PostScript colour imagesetters. Claimed to be the first to separate all elements on the page, including imported TIFF, RIFF, PICT2, and EPS files. DesignStudio Separator uses the industry-standard CIE colour model for converting RGB to CMYK. In performing the conversion, the software shows which displayed RGB colours fall outside the printable range, and provides an option for manipulating the colours accordingly. The hardware

supported by DesignStudio now includes Linotronic, Compugraphic, Crosfield and Scitex systems through the DeScipher package from Premier Graphics. Any bureau should be able to accept DesignStudio files. Other Mac programs that support EPS can take advantage of DesignStudio Separator.

FrameMaker

2.0

A step beyond "desktop publishing". Its pedigree includes 25 different computer architectures mostly of the Unix variety. Supports 11 languages in addition to English. Sophisticated word processing and graphics, combined with dedicated book-building tools, attractive to the publishers of technical journals, books, reports and structured documents (it offers up to 25 master pages per document). Tracks revisions and allows multiple authors, even on different computer platforms.

\$1,999

Frame Corporation
Trio Technology

2092 desktop publishing

Imprint

A multi-lingual typesetting and page layout package giving the user the ability to create "ready to print" original masters in Urdu, all Indian languages, Chinese, Japanese, Thai, Korean, English and other Roman scripts. For Chinese and Japanese the traditional vertical text entry read from right to left is also supported. Features text wrap which can be designated to wrap from any or all sides of an any shaped, intervening object (other text, graphics or picture elements). Supports multi-column text, borders of various pen-thickness and corners, varied grey-level shadows or fills, and text can continue on the next page. Also features master pages, guide lines, multiple views, picture scaling, hand cropping, on-screen ruler, multiple measurement units, text rotation, on-screen controls for line and paragraph leading, first-line indent, left and right margins, advanced font and style sensitive text search and replace, EPS and PICT import, printing with or without tile marks, and more. The necessary languages, fonts and script interface systems are also available from Ivy Systems. Ivy script interfaces can modify the operating system so that sorting, indexing and other data processing functions become meaningful within that particular language. How would you "sort" Chinese, for example? Certainly not with an English alphabet sort algorithm. Beyond that, all system dialogue boxes, messages and menus could be localised.

Letraset Studio Line CD

A complete, integrated suite for design and publishing, consisting of DesignStudio (page design), ColorStudio

(24-bit colour image creation), ImageStudio (grey scale photo retouching), LetraStudio (display type design) and FontStudio (font creation and logo design), at a saving of 20% over the combined price of the programs sold separately. Besides the applications, the disk contains a compendium of information about related services and products – third party vendors of scanners and printers, for example – using audio-visual animation and also offering software and information access via a HyperCard interface.

Letraset USA
Letraset Australia

2092 desktop publishing

LetraStudio 1.5

Type customising software for display type, logos, signs and headlines; works with the LetraFont Type Library. Combines the functions of dry transfer lettering, repro-camera and distortion lenses. The digitised typefaces in the type library contain all design elements specified by the original designer, including alternate characters, ligatures and flourishes. The fonts are stored and manipulated on screen as high-accuracy outlines and are output as EPS files to a printer, or in desktop publishing and graphics programs that support EPS. LetraStudio typefaces can be used in combination with scanned or painted images and saved in RIFF for further manipulation with the ImageStudio image-retouching software. LetraStudio also supports the Pantone Matching System for specifying colour on screen and separating spot colours. Lets users control letter spacing, kerning and character height and width. Characters can be scaled, slanted and distorted to create a range of special effects. The program has 15 preset distortion shapes and tools for creating rectangles, circles and curves. Type forms can be fine tuned by adjusting shape control handles. Type can also be arranged inside or outside the circumference of a circle. The PostScript code of a file can be printed to a disk and edited with a word processor.

Personal Press 1.0

A low-end page layout offering from Silicon Beach. It offers well-developed word processing power with thesaurus and spell-checking, posted notes and custom styles. Graphically it offers image controls for greyscale photos, full 24-bit PICT colour support, and spot colour separations, adequate for most desktop colour printers.

POA

Aldus Corporation
InfoMagic Pty Ltd

2092 desktop publishing

Publish It! 1.2

A full-featured publishing tool including page layout, word processing, typesetting, editing (drawing and text). Includes linking tools, advanced on-screen Help, a comprehensive Undo feature and full graphics editing. Features page magnification from 12% to 800% in single, facing and thumbnail pages; three master pages for left and right hand pages, and one for both sides of the page; and the ability to change bit-mapped images to EPS art. The word processor will not import from Word 4 and MacWrite II, but has a 160,000-word spelling checker and a 240,000-word thesaurus. Text effects include V-shaped, pyramid or slanted, flow text around or through a graphic, and rotate text or graphics in one degree increments, but not true WYSIWYG. Problems include imperial default page sizes; displaying US Letter size with margins for A4 set off the page; few keyboard commands for simple procedures; lengthy hierarchical menus; complex changes to graphics commands. Exporting text loses all formatting; importing text can be difficult as style sheets are not supported. The Undo command does not work for text formatting mistakes. By the same token it is inexpensive, uses a limited amount of RAM, is well-documented, includes 70 high-quality templates and a variety of EPS clip art.

Quark XPress 3.0

Professional-level layout and precision typesetting tool. The word processor gives you full control over word and letter spacing, includes a built-in 80,000 word dictionary and spelling checker, global search and replace with wild card searches, and tabs with fill characters. Features automatic and manual hyphenation dictionary, variable font sizes (2 to 500 pt), document editing with sequential or facing pages displayed, print colour separations, mirrored and negative pages or images with registration marks; automatic pairwise and manual track kerning to 0.01 em space, absolute and relative leading with 0.01 point accuracy; automatic text flow from column to column, page to page, automatic page insertion for text overflow; default master pages, and page insertion from one XPress document to another. XPress will automatically wrap text around any graphic or object, and fill the gaps on any jagged side. Graphic scaling and cropping can be done visually and numerically. Page sizes are arbitrary up to 36 inches square. Import features include text files, MS Word, MS Works, WriteNow and MacWrite with all formatting intact, graphics from MacPaint, PICT, TIFF and Encapsulated PostScript formats. Printing options include Thumbnails overview, colour output to the ImageWriter II, and automatic tiling for oversized documents and newspaper publications. Version 3.0 adds a pasteboard metaphor and multiple, retroactive master pages, makes optional the parent/child method of grouping text blocks and adds flexible item grouping. Rotation of elements is handled on page and can be done in 0.001-degree increments. Thumbnails view now shows actual representations of the pages (rearrange pages within a document in the Thumbnails view or move pages between documents). Offers more kerning, leading, and text alignment controls. A text run-around feature will let users manually or automatically run text around graphics boxes of any shape.

TypeStyler 1.01

This was the first program that let you do to type what you've been doing with graphics all along: bend, shape, curve or style. Designed to work as an accessory with most popular desktop publishing applications such as page layout, draw programs and more. As a stand-alone application it brings a new levels of control to projects like professional signs, gigantic banners, flyers and full-size posters. Features include the ability to manipulate many third-party PostScript fonts, to produce professional output on any Macintosh-compatible printer and import and export Paint, PICT, TIFF, EPS and Illustrator files. EPS files can be transferred to a MS-DOS machine. It supports on-screen colour and full page displays, and includes editable background artwork and templates. It comes with a library of 35 customisable shapes for text, in 35 styles.

2095 form design

Adobe TrueForm 2.0

A forms processing program which automates your existing paper forms without having to replace them, change the way you work, re-train personnel or replace your current stock of pre-printed forms. Forms are digitised by scanning. Provides spreadsheet calculations, verification of the accuracy of entries, issuing warning or advisory messages, and guides the user through the process of filling out the form. TrueForm permits data sharing to databases, accounting packages or other computers on other platforms. It has many new features in the v. 2.0 upgrade: using multiple search criteria to search through forms; grouping logically related fields to prevent data entry errors; more spreadsheet and database functions and operators (forms can be completed with the keyboard or via database or spreadsheet merge); two levels of password protection; and built-in hooks for 4th Dimension databases. The printing interface enables you to print without leaving 4th Dimension. It offers 20 ready-made forms, but has no drawing tools. You can also print complete forms, or only their contents onto pre-printed forms. All Macs \$698
Adobe Systems Inc
InfoMagic Pty Ltd

2095 form design

FastForms 2.0

A forms designer featuring a variety of drawing tools. Creates, fills, prints and saves a variety of professional-quality business forms. You can define fields for rapid data entry and custom reports. Forms can be edited, searched, imported, and exported. Forms can be numbered sequentially. Includes a desk accessory for retrieving forms. The variety of graphic

tools within FastForms includes true hairlines, PostScript grey screens, boxes and circles, and some object distribution tricks. Serves as a front-end for other database applications. When completed, use the FastForms DA to fill it out. Print the completed form and/or save the data to disk. Easily reproduces or alters existing forms by tracing over old forms from hard copy after scanning them in.

Cricket Pict-O-Graph 2.0

A pictogram tool for business, science, and publishing applications. Can be used to create colour pictograms, produce specialized pictograms with integrated text, position pictograms for side-by-side comparisons, import existing files from CA-Cricket Graph and other programs, and export pictograms to desktop presentations with CA-Cricket Presents. Mac Plus, SE, II \$210

Computer Associates International Solutions

2100 graphics

DeskPaint/DeskDraw 3.0

A colour painting program that comes as a DA. Create/modify graphics while working within any application. Handles PICT and TIFF files, including 24-bit colour images. Graphic tools include: hand, paint brush, zoom tool, paint bucket, pencil, lines, variable sized eraser, circle, rectangle, and round rectangle, fonts with style and justification, including the ability to create user definable text "fields", several copy modes (normal, transparent, inverted). You can also select line, fill and

brush patterns. Other features include editing MacPaint files at 72 dpi and TIFF files up to 4000 dpi; special Laser Tools to scale images for the LaserWriter; adjust brightness or shading, especially on scanned images; large screen support; free rotate, flip, and reverse images; magnify images up to 16 times (editable at every level); comprehensive range of Paint tools and patterns.

Mac Plus \$325
Zedcor
Trio Technology

2100 graphics

Digital Darkroom 2.0

Provides the capabilities of a photographic darkroom so you can merge and blend greyscale scanned images, transform and resize them. Some features: Filters and brushes; AutoTrace to convert scanned images to line-art (for use as EPS files in other programs and hi-res printing); transform images, reflect, rotate and more; advanced printing features enhances final image. Includes a Magic Wand selection tool, which selects according to contiguous grey values, allowing users to pick a complex shape out of its background by clicking on it. Manipulate the brightness and contrast, control the half-tone options, and pass the image through filters that blur, sharpen, enhance edges or remove noise. Special effects include posterise, inverting and equalising. Advanced users may adjust a gray map that represents the greyscale information, applied to the entire image or to selected regions. Portions of an active selection can be clipped and deleted with the Scissors tool. Paste selections in front of or behind an existing image, or blend with it. Imports and exports files in PICT, PICT2, TIFF, MacPaint, SuperPaint, EPS, Illustrator and ThunderScan formats. Also features image, scanner and printer calibration; colourisation as true 24- and 32-bit colour; realtime transformations; image composition controls; one and 8-bit brushes to modify images; precise layout environment. Mac Plus, SE, II \$598

Silicon Beach Software Inc

2100 *graphics*

ImageStudio 1.5

A sophisticated scanned-image retouching and graphics tool, for enhancing scanned photographs and line art. Supports up to 65 shades of grey, allowing users to zoom into a Fatbits mode and change the grey value of individual pixels. On the Mac II, it can display images with their greyscale data for fine tuning. Tools include a pencil; a charcoal stick, which gradually builds up to a specific shade of grey; a realistic paintbrush (splatters and all); a water drop for smoothing out rough edges; and a finger for blending together shades. There are also more than 30 special tools and pens for special effects like highlighting, airbrushes, edge-softening, and paint-smearing. A powerful greymap editor lets users modify picture contrast and brightness, in realtime with a greyscale or colour monitor. The greymap editor lets users create negatives or special effects like posterisation and solarisation, or create custom greymaps for even more specialised effects. An assortment of photographic filters lets you control image sharpening, blurring, diffusion and even edge tracing. Digitised images can be brought in from most popular scanners using a variety of file formats including TIFF, ThunderScan, RIFF, and MacPaint. Export retouched images through TIFF, RIFF, EPS or MacPaint. Produce your final copy to any PostScript device. Mac Plus, SE, II \$895

MicroAustralia Computer Products Pty Ltd

2100 *graphics*

Studio/1 1.0

This is a Paint program with a difference. Not only do you have the power of a

MacPaint style program but it provides animation as well. The monochrome program offers two animation techniques. One (AnimPainting) has a created object follow a designated path by generating the images needed from the start to the finish point; the other (Animoving) is a hybrid 2D/3D approach where the former is mapped into a 3D database. Studio/1 saves animations very efficiently by saving only the differences between frames. \$215

Electronic Arts
Entertainment & Computer Products

2100 *graphics*

Studio/32

32-bit colour painting, image enhancement, with all major colour matching models, and output options for 4-colour separation with compatibility to PostScript and QuickDraw printers, a scanner utility, a slideshow presentation function, and more. POA

Electronic Arts
Entertainment & Computer Products

2100 *graphics*

Studio/8 1.0

Preserves the MacPaint interface standards, but adds many supersets. It offers the image distortion (the "bend" effect), where a selection can be wrapped around an imaginary shape; programmable airbrushes; modifiers for ordinary paint tools such as pencil, eraser, paintbrush, polygon; fully editable Bezier tools; make selected colours opaque or translucent; finds and highlights specific colours in the document; mask and reverse mask objects; perspective plane; brush creation; colour mixing and graduation. It lacks a colour separator for output. Excellent on-screen Help; utilises virtual memory so the program will run on 2Mb. \$600

Mac II, 2 Mb RAM, 6 Mb disk space
Electronic Arts
Entertainment & Computer Products

2100 *graphics*

SuperPaint 2.0

Combines painting and drawing capabilities. Customisable features and selection tools in the Paint layer offer flexibility, while the Draw layer offers precise graphic control; AutoTrace bitmaps objects for more precise images. Transform images with rotate, slanting and more; mix fonts, sizes and styles. The software supports TIFF images from scanners, and offers a colour preview. \$298

2102 CAD and design

Clariscad

2.0

Offers more than 100 new features over the previous version. Provides speed, ease of use and full 2D drafting capabilities. The "Tools, Methods and Modifiers" technique offers users an accelerated learning curve. The new Graphic Guide is fully customisable; it tracks and interprets the user's mouse motions, automatically guiding users to fast, accurate drawing and editing. Incorporates Claris' XTND, which allows developers to create applications and utilities for exchanging graphic information in other formats.

Data may be exported from Claris CAD 2.0 to spreadsheets and databases to create Bill-of-Materials and schedules. The Intelligent Wall capabilities allow easy creation, reshaping, dimensioning and filling of wall objects. Claris' context sensitive, on-line

HyperHelp technology is included. Also includes a training video and supports A/UX 2.0. The Claris Graphics Translators provide access to DXF and IGES file formats. MacDraw II owners may also update to Claris CAD. Available in single units, in multiple packs and by site-licence.

Infinite Graphics Inc
Intuitive Systems

2102 CAD and design

MacDraw II

1.1v2

A 3-10 times faster update of Apple's original object-oriented drawing program for the Mac. Zoom capability enlarges the

drawing area up to 32 times or reduces it down to 3% of normal size; objects can be rotated at any angle; create object libraries for frequently-used objects. Offers enhanced speed for complex drawings, a spelling checker and a Notes feature which allows the user to annotate documents with electronic stick-on notes. The spelling checker shares dictionaries with other Claris products. Slide Manager capabilities facilitate previewing, sorting, editing and managing 35mm slides and overhead transparencies for presentations. Supports slide-imaging devices. Features keyboard commands with Claris' on-line HyperHelp, and permits the user to designate default settings and specify them as menu choices. Provides on-screen colour, colour output and colour separations, and exports graphics via the Clipboard, PICT and PICT2 formats. Plus \$625

Claris Corporation

2103 presentation and animation
MacroMind Director 2.0
Computer animation and presentation package. Lets users create multimedia presentations, produce desktop video productions and simulate engineering or scientific projects. Utilises moving graphics to convey a message or animation with sound effects to visualize a prototype. Gives control for producing presentations with text, graphics, audio, video and animation. Genlocking and video output is possible with any Mac-compatible video peripheral.
Mac Plus, SE, II \$1,175
MacroMind Inc
Firmware Design

2103 presentation and animation
Microsoft PowerPoint 2.0
Used to prepare free form presentations such as slide shows, flip charts, overhead slides, bullet charts and diagrams, speaker's notes or audience handouts. It gives presentations a polished look by using borders, drawings, graphs, logos, slide numbers and time and date of printing which appear as part of each slide. Easy to use, it lacks an outliner, but allows paste from MORE. Lacks a facility for aligning objects, and graphs and tables must be imported from other applications.

A slide sorter permits changing the order and cutting and pasting to another file. Text and graphics can be mixed freely anywhere on the page. A slide sorter feature allows presentations to be made in any desired order. LaserWriter compatible.
\$625

Microsoft Corporation
MicroAustralia Computer Products Pty Ltd

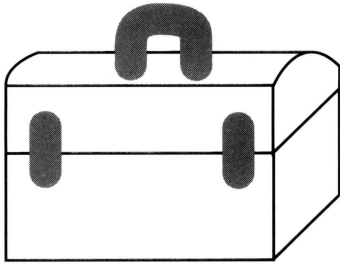

2103 presentation and animation
Shapes
An add-on module for ColorStudio. Shapes adds outline drawing and anti-aliased rendering tools, the technology used to give film and video graphics the smooth quality we expect in broadcast video. Offers an enormous range of fonts which can be anti-aliased - at any resolution. Improves print as well as multimedia output, and it can output to non-PostScript devices such as pre-press systems from Crosfield, Scitex or Hell, paintbox systems such as Quantel, Aurora or Composium, film recorders such as Celco, transparency printers, Iris inkjet printers, and others. The same file can be rendered once for video resolution or screen presentation, once for hi-res film, and again for print.

OUTPUT TO

AZIMUTH

This application comes with data files
of continents, countries, and sub-
areas for map projections which may
be edited and printed by the program.
Lets say for instance I need a quick
map projection of the Central Eastern
States to which I want to add objects
and lines to illustrate a network setup
between offices. I would import the
data files of the states I need then edit
the drawing with the program's tools,
including symbols, creating the
network design.

2132 disk and file utilities

These are programs which perform a wide variety of "housekeeping" chores — such as file conversion, file recovery, file location, disk backup, encryption and hard disk defragmentation. Some also help translate between file formats, including MS-DOS and Apple II type files.

2132 disk and file utilities

AutoSave II

1.1

A cdev utility which permits the user to automatically save any document in a specified application. Particularly useful for users who move between applications.

All Macs \$80
Magic Software
Keyway Computers

2132 disk and file utilities

Backer

1.0

A DA that works in the background, allowing users to backup while working. It operates automatically, will work on almost any medium (including over a network), and will back up a file server while it is running, eliminating down time. Saves files in Macintosh format so you can use Finder to retrieve the files, rather than worrying about special formats and converting files back.

\$195

Moose Software
Solutions

2132 disk and file utilities

Backmatic

1.1

A combined cdev/INIT designed as a substitute for daily incremental backups. Searches a hard drive at shutdown for files changed since the last time it ran, and then saves them to floppies. Can also be set to save files to a folder on a hard disk or file server. Allows exclusion of files based on file type, creator, folder, or disk on which they reside.

POA

All Macs
Magic Software
Keyway Computers

2132 disk and file utilities

CanOpener

1.1

A DA which opens any file, whether the application is present or not, for extracting text, graphics (Paint, PICT I and II, EPS), or sounds. Full search and editing facilities available.

All Macs \$169
Abbott Systems Incorporated
Spinning Heads

2132 disk and file utilities

DiskDoubler

1.2.5

A fast, "smart" file compression program designed to optimise disk space. It leaves the correct disk icon attached to a compressed file, so when you uncompress a file it also opens the correct application to read it.

\$125

Salient
Next To Mac

2132 disk and file utilities

DiskExpress II

2.04

A hard disk optimiser which automatically starts to defragment and optimise drives whenever the computer is idle or at user request. Fully transparent, it constantly logs all file activity to determine optimum priority for file placement, grouping frequently used files together. By optimising one file at a time, it can be interrupted without scrambling information an requires virtually no free space to work.

\$125

Mac Plus, SE
ALSoft Inc
Zytech

2132 disk and file utilities

DiskFit

A quick and efficient hard disk backup utility. It creates disks with standard HFS files, allowing you to restore files from the disks using Finder. It has incremental backup capabilities for day-to-day backup, and it fully verifies what it writes - something even Finder does not do. A network version works with AppleShare and can backup an entire file server. It has the important added feature in that it also remembers all access privileges and ownership attributes, and can restore them, saving hours of manual work.

It scans your hard disk for files that need to be backed up. Then it deletes obsolete files from the backup disks and fits your new files - in standard Macintosh format - into the reclaimed space. Automatically verifies the integrity of the backup, and generates a backup report. Network DiskFit also available for \$549. Network DiskFit allows AppleShare and TOPS network administrators to automatically backup and restore fileserver volumes

with folder level hierarchies and access privileges intact while performing incremental backups.

Mac 512 K \$139
SuperMac Technology
MicroAustralia Computer Products Pty Ltd

2132 disk and file utilities

Fastback II for Mac

2.1

A hard disk backup utility. Backs up data to floppy disks, tape or any Finder-compatible device; also MultiFinder friendly, can work in background mode. Features error correction and selectable data compression, built-in macro recorder and editor. Scheduling macros let you automate backups at any chosen time. It concurrently reads from hard disk and writes to floppy, using proprietary floppy-disk format to write the data.

\$256

Fifth Generation Systems Inc.
MicroAustralia Computer Products Pty Ltd

2132 disk and file utilities

FileGuard

2.0

Provides automatic protection by offering encryption with each Save, encryption on shutdown and opening the program on keying of correct password. Denies access to an encrypted file, even if the user starts up from another disk. Encryption survives crashes, and the process is easily reversed, with a history of file usage provided on request. Transparent and available at all times through menu and control panel. Version 2.0 provides DiskLock, protecting the volume itself. 5 office pack \$879; 10 office pack \$1465

\$354

Highware
Techflow Pty Ltd

2132 disk and file utilities

MacSafe II

Provides password security for Mac files and networks by creating "safes" on the Desktop, plus optional encryption. Offers password protection for 20 files totalling 3.5Mb in 3 seconds; encrypt 100K in 2 seconds. Other features include: cdev control and Administrator override of safe passwords.

Mac 512K \$US190
KentMarsh Limited
none/TBA

2132 disk and file utilities

Norton Utilities for the Macintosh 1.0

Features data recovery, repair and disk optimization utilities. Disk Doctor provides 45 types of error checks for restoring data and repairing damaged Macintosh disks. File Saver can restore an accidentally reformatted 40Mb hard disk in seconds. UnErase retrieves all erased files; search "By File Type" for over 40 kinds of applications files or "By Text Search" for text strings, as well as recover partially over-written files. Speed Disk consolidates and prioritises all files, removing unused fragments to reduce data access time and speed performance. Also provides DAs and cdevs, such as Fast Find (a file locator), Directory Assistance (adding power to "Save" and "Open

Dialogue Boxes”), and KeyFinder (easily finds the keystrokes needed for Option characters). No technical expertise is required.

\$210

Symantec Corp
PC Extras Pty Ltd

2132 disk and file utilities

PC Tools Deluxe 1.0

A collection of disk utilities and data recovery tools. Includes: Optimizer, which cures fragmentation and thus enhances access time on hard drives by gathering and consolidating unused space; Mirror, which protects against disk crashes, accidental re-initialization or deletions, and viruses; PC Secure, a password protection and file encryption tool; MacTools, a collection of disk and file utilities; Locate, a DA based on Find File, which locates files by name, key words or phrases; FastCopy allows rapid copies to either 400K or 800K floppies; and PC Backup which supports background operation under MultiFinder.

\$110

Central Point Software Incorporated
PC Extras Pty Ltd

2132 disk and file utilities

Redux 1.5

A backup and restore utility that features file filtering capabilities, a choice of Redux or Finder format backups and support for large screens, colour and MultiFinder. Backs up to any HFS volume, including floppy disks, hard disks, removable media, and mega-floppies. Can cope with a damaged or lost backup disk.

\$149

Microseeds Publishing
Firmware Design

2132 disk and file utilities

ResEdit 1.2

Allows you to manipulate the various resources in a Mac application. Documentation included. A dangerous tool in unskilled hands.

\$20

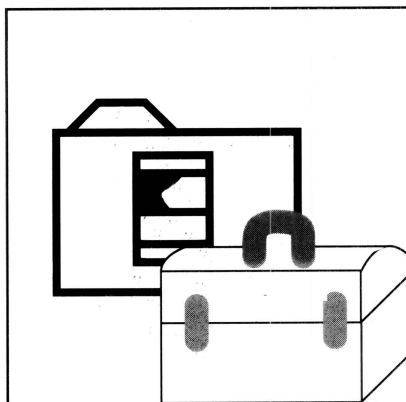

Apple Computer Inc
AAPDA

2132 disk and file utilities

Retrospect 1.11i

Finds and selects files by name, date parameters, file kind, icon colour, file size, backup history and more. Backup archives can be password protected, compressed, encrypted, verified, etc. Will backup from anything to anything, but with a hard disk or a tape drive – and assuming adequate space – your backup plan can be totally automated months ahead, with all activity taking place at any designated time, even unattended. Retrieving lost, trashed or damaged files or making total disk recoveries is more or less a reversal of the backup procedure, and can be scripted or even automated. Not a “Macinised” IBM program like FastBack and MacStream.

Mac Plus, SE
Dantz Software Development
Keyway Computers \$395

2133 system utilities

This includes software designed to enhance the basic System beyond the functionality initially provided by Apple. These include “suitcase” type programs used to store “as needed” extra fonts and utilities, screen savers, keyboard enhancement and other macro-creation software, software designed to enhance the basic interface, and miscellaneous cdevs and INITs. By definition these all install in the System folder.

2132 disk and file utilities

Silverlining

Powerful hard disk management software used to maximise the performance of SCSI drives. Furnishes volume-sizing functions and advanced partitioning features that allow as many as 40 partitions which can be dynamically adjusted without data loss. Provides a choice of six selectable Read/Write loops, password protection, optimising, etc.

Deneba Software
PICA Pty Ltd

2133 system utilities

DiskTop

4.0

A DA alternative to using Finder. It performs all the standard desktop file functions of Finder, such as copying or deleting files, reporting vital disk statistics, and displaying up to eight different disk icons. It can perform operations on several files at once, and “quick-launch” to

another application without returning to the Finder. Contains a Find button to search for a file on any or all of the displayed disks. Includes GOfier 2.0 for searching multiple files using key words.

\$160

CE Software Inc
Keyway Computers

2133 system utilities

Font DA Juggler Plus

A DA organiser allowing simultaneous access to hundreds of DAs, fonts, Function keys and sounds without having to install them into the System. Automatically resolves font numbering conflicts and allows fonts to be printed or viewed in hundreds of size and style combinations. Opens up to 12 files on multiple volumes, including file and disk servers. Includes a companion utility which groups related fonts into families, only listing the main families on the menu.

\$105

ALSoft Inc
Next To Mac

2133 system utilities

Icon-It

2.0

Allows the creation of personalised icons for frequently used commands, menu items, DAs, fonts, Function keys and macros. Icons are displayed on an "icon bar" anywhere on the screen and within applications. Icon Bars are included for the most popular programs, or can be constructed using the built-in editor. A scrapbook of over 125 icons is included.

\$143

Tactic Software
Reliable Australian Distributors Pty Ltd

2133 system utilities

INIThound

An INIT utility for tracking, managing and debugging INIT software. It monitors the INIT installation process and provides information vital to systems and network administrators, customer service representatives, and software developers. It provides a single, simple mechanism for inhibiting INIT activity. Reports are generated via the Control Panel.

\$210

Cambridge Information Ware
Reliable Australian Distributors Pty Ltd

2133 system utilities

INITPicker

Detects conflicts between INITs in the System folder. Intercepts system crashes that occur at startup when two INITs are in conflict; the computer is automatically restarted with the offending INIT not loaded and the user is notified about which INITs were rejected. Also allows the user to save sets of INITs, and offers a log of INITs loading, specifying the RAM used by each. Shows all the INITs in your system, to allow easy identification of any new or unfamiliar INIT, and allows them to be turned on and off at will. Can be accessed via the Control Panel and may be used at any time, changes take effect upon startup or restarting.

MediaTracks

A training tool for creating inexpensive tutorials. Enables users to "tape" a Macintosh screen session, edit it, add sound to it, annotate it, and play it back in a variety of ways. Merges two existing Farallon technologies: ScreenRecorder and MacRecorder. Works by replaying programmer's on-screen moves and voice comments alongside whatever video material is attached to the MediaTracks "time line" of on-screen events, providing realtime presentations. Consists of several components: a module of ScreenRecorder 2.0 software, a Multimedia Pack module that incorporates sound using Apple's HyperCard technology and an upgrade package for users of Farallon's ScreenRecorder 1.0 software. The editing facilities are simple, and adequate for all but glossy presentations. A Macintosh CD ROM version of the Mediatracks Multimedia Pack was announced. 3020 library management

Pro-Cite for the Macintosh

2.6

Designed to help users compile bibliographies and use citations, widely used in libraries, research and education; it's a specialised database and text

management system specifically aimed at academics and librarians that enables users to compile and maintain bibliographic information using 20 predefined and six user-defined document types (including reports, letters, manuscripts, audio-visual material, computer programs, books and journals). Also provides a turnkey solution for business, consolidating valuable documents. Allows automatic output of formatted bibliographies in 26 styles, including international standards. Searching, sorting and indexing are possible on all fields. Records may be searched via Boolean logic and the resulting entries combined to form a specialised bibliography. Other features include: variable length fields and records, detection of duplicates, full screen editor and context sensitive help. Each database will hold a maximum of 32,500 records. MultiFinder compatible.

3030 education

Beethoven's 9th Symphony

This product is the first of a kind. The concept is simple: take standard audio CD and play in the Apple CD-ROM drive under control of a Macintosh running HyperCard, adding text, graphics, commentary, and other controls for the listener, exploring the work in great depth utilising a variety of media. It's a full interactive study of the famous symphony by Robert Winter, a well known music critic, author and musicologist. Offers notes on Beethoven's life, insight into musical architecture, and the imaginative use of comments running while the disk plays. A must for anyone with even a casual appreciation of classical music.

Pica programs that deliver the Macintosh Advantage!

Helping people work better. Together.

RagTime

Word processing, spreadsheets charts and forms for the integrated office.

Marco Polo

Document and file archiving and retrieval for individuals and AppleShare networks.

MarkUp

Workgroup review, editing and annotation tools for any Macintosh document

uShare

Powerful networking with an AppleShare compatible file server for Unix workstations.

Canvas 2

The complete drawing and painting program with tools for bitmaps, objects and images.

UltraPaint

The complete, low-cost colour painting program with a unique selection of special effects.

Mathematica

Mathematical analysis with graphics and a mathematical programming language.

Extend

Graphic simulation and modelling with general and specialist libraries for manufacturing and electronics.

Aperture

A complete 2D CAD program with integrated database for object, facility and drawing management.

Design

Complex systems modeling and analysis from flowcharts to communications networks.

StatView

Statistical analysis and flexible presentation graphics for all your reports and documents.

SuperANOVA

General Linear Modelling with a full range of analysis procedures and presentation tools.

Pica has a proud tradition of supplying innovative and important software to Australian Macintosh users. Our current range of integrated office, workgroup and technical visualisation software combine the best available programs with Pica support for everyone who wants the Macintosh Advantage.

Contact your local Reseller or Pica for demonstration disks and further information about any of these programs on (03) 370 3566.

IF YOU'RE CONSIDERING AN APPLE MONITOR,

Once again, Radius turns display technology on its ear. Introducing Pivot,TM the first display that goes from portrait to landscape with only a gentle push. ● The new pivot is the first display that changes orientation, in real time, to match the

format of your project. For example, when you're writing a manuscript, you can see a full page in portrait position. And when you switch to spreadsheets, you can rotate Pivot to view all twelve months. ● Four levels of grey are furnished, with

radius

© 1990 Radius Inc. Radius, the Radius logo and Radius Pivot Display are trademarks or registered trademarks of Radius Inc.

HERE'S A NUDGE IN THE OTHER DIRECTION.

upgrades to 16 levels for near-photographic quality images. Ideal for graphic design and desktop publishing. ● Pivot is compatible with virtually every Macintosh application and may be used with either the Macintosh SE/30 or the Macintosh II

family. ● To find your nearby Radius reseller, phone Allaw on (02) 415 9111. Then, before you buy a display for your Macintosh, check out another amazing way to look at things from Radius.

PALOMINO COMPUTERS

Here's a short story that you've never heard before:

A 105 Megabyte hard drive measuring 1" x 5" x 8". It easily fits in a briefcase or can be locked away in a file cabinet or safe for security. Ultra compact drives- there's no fan or power supply (we pull power directly from the Mac). 50MB - right size nice price.

Quantum drives with access times of 15MS - that's fast !!!!!

Ultra Compact Drives 1 x 5 x 8 inches

You can't always choose the data you have to manage.

But you can choose how to manage it.

Sometimes it seems our world is built on data. Customer names. Stock codes. Discount levels. Sales dates.

Pieces of information we must somehow keep track of and do something with.

Which is why so many people are turning to FileMaker™ Pro software.

It's an easy-to-use database manager for the Macintosh that helps you control the data you have to manage.

For example, you can automatically update mailing lists. Track sales any way you can think of. Share parts of your files on a network with some colleagues but not with others. And publish the results in full colour.

Yet its power shouldn't frighten you. FileMaker Pro is remarkably simple to use.

You learn no programming language. And you can begin immediately; FileMaker Pro will show you how to get started right on the screen.

When using other software, FileMaker Pro lets you exchange

words and graphics with your word processor, spreadsheet or drawing tool, for example, all with the click of a mouse.

But why not see it for yourself? Just stop by an authorised Claris dealer and ask to see FileMaker Pro.

FileMaker Pro.
The #1 database manager
for the Macintosh.

CLARIS®

Purchase FileMaker II now and receive an upgrade to FileMaker Pro absolutely free from Claris. Requires dated proof of purchase. Offer good through December 31, 1990.

Use the Power of PostScript.

POSTSCRIPT

Adobe PostScript

Adobe released PostScript in 1984. Since then, it has become the industry standard for electronic publishing and graphics. PostScript dramatically improves the appearance and effectiveness of all your visual communications. Its device and resolution independence allows you to transfer documents from one computer to another, and from one printer or imagesetter to another. So it's natural to expect that Adobe, the people who created PostScript, also have the best products to use the power of PostScript.

Adobe Type Library

If you own a laser printer using Adobe's PostScript, you're already experiencing quality typefaces from Adobe. You see, the fonts built into your printer were created by Adobe. The library of Adobe PostScript typefaces has grown from 13 fonts in 1984 to more than 600 fonts today. The Adobe Type Library brings the traditional craft of fine type to your laser printer.

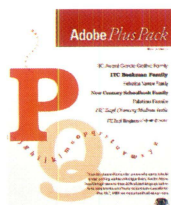

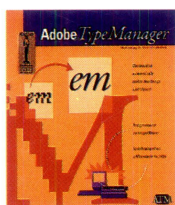

Adobe Font Folio

The Adobe Font Folio provides you with fast, easy access to the Adobe Type Library. The fonts are loaded on an 80 Mb hard disk that attaches to the SCSI port on laser printers such as the Apple LaserWriter II NTX. You'll never have to download fonts to your printer again, and it's the most economical way of getting the best range of type in the business.

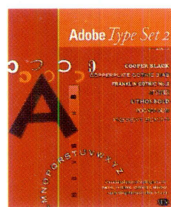

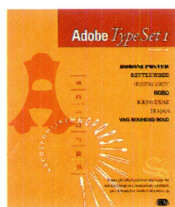

Adobe Type Manager

Smooth out the jaggies on your Macintosh screen and non-PostScript printers such as the Apple ImageWriter and the HP DeskWriter with Adobe Type Manager (ATM). You'll see crisp, smooth-edged type wherever you look. Adobe Type Manager installs easily and is transparent in use. It comes bundled with Times, Helvetica, Courier and Symbol. Of course, Adobe Type Manager is fully compatible with the entire Adobe Type Library. So kiss those jaggies goodbye, today!

Adobe Plus Pack

What more could users of Adobe Type Manager ask for? The Adobe Plus Pack provides the standard font set for ATM users who want to build a hard-working, well-rounded type library. Seven type families (22 fonts in all) complete the set of fonts resident in the Apple LaserWriter Plus and most other PostScript printers. Together with ATM software, it's a powerful combination for you and your printer.

Adobe Type Sets

Add the Adobe Type Sets to your font collection and you can't go wrong. Each set gives you seven carefully selected display fonts from the Adobe Type Library. Use with Adobe Type Manager to give your publications a facelift, and save hundreds of dollars compared to purchasing these typefaces separately.

Font	
Agaramond	Regular
Chicago	Italic
Geneva	Semibold
Helvetica	Semibold Italic
Monaco	Bold
	Bold Italic

Adobe Type Reunion

Having trouble finding a familiar face in a crowd? If you're spending too much time scrolling through your endless font menu trying to find that elusive italic or bold font, you can now use Adobe Type Reunion to automatically sort your font menu by typeface family name. Quickly find the font you need, then use the convenient sub-menu to select the style you want.

Adobe TypeAlign

Complicated-looking type effects are now child's play with Adobe TypeAlign. It's simply a matter of choosing a tool to draw an arc, straight line or freehand curve. Then type text on the line, manipulate it to your heart's content and see the power of PostScript working. Since Adobe TypeAlign is a desk accessory, you can use it while you're in any Macintosh application. And it works with ATM and all the Adobe Type Library fonts.

Adobe Smart Art

You don't have to be an artist to use Smart Art. That's why it's "smart". Use this library of text effects, graphics, borders, and more, to access the power of PostScript. Smart Art is easily installed as a desk accessory, so it's available from within any Macintosh application. There are four volumes, each containing 15 effects which you can customise as you require.

Adobe products are distributed exclusively by InfoMagic in Australia and New Zealand, and free technical support is provided to registered users.

Yes! I want to use the power of PostScript.

Please send more information on Adobe products.
